

REFRACTION OF LIGHT

PHYSICS

1. It is the abrupt change of velocity of light wave as it passes from one medium to another medium of different density.
 2. It is the bending of light waves or rays as they travel from one medium to another of different density.
- Note: The boundary between two media is called the interface.

Consider a light ray from a source incident on a refracting surface.

Where :

- I = incident ray
- R = refracted ray
- N = normal line
- i = angle of incidence
- r = angle of refraction
- n = index of refraction of medium

EXPERIMENTAL LAWS OF REFRACTION

1. N, I, and R are co-planar
2. **SNELLS' LAW** – a relationship relating the index of refraction in a given medium and incident light angle, to the index of refraction in the new medium and the refracted light angle.

$$n_1 \sin i = n_2 \sin r$$

Where:

- n_1 = index of refraction of medium 1
- n_2 = index of refraction of medium 2
- i (θ_1) = angle of light in medium 1
- r (θ_2) = angle of light in medium 2

ABSOLUTE INDEX OF REFRACTION (n)

It is the ratio between the velocity of light in free space or vacuum (C), to the velocity of light in the medium (v). In vacuum, velocity of light is $3 \times 10^8 \text{ m/s}$. As the index n increases, the speed decreases.

$$n = C/v$$

Where:

- n = refractive index
- $C = 3 \times 10^8 \text{ m/s}$
- v = speed of light in the new medium

Introduction to Optics Nkoma, John S., Jain, Pushpendra K., 2019-05-22
 The book introduces university undergraduates to the fascinating world of the science of light Contemporary physics programmes are under increasing pressure to provide a balance between coverage of several traditional branches of physics and to expose students to emerging research areas It is therefore important to provide an in depth introduction to some branches of physics such as optics to students who may not become professional physicists but will need physics in their chosen professions Some Universities offer optics as semester courses while others offer it as modules within general physics courses in the degree programme The book meets the needs of both approaches Optics has three major branches Geometrical optics Physical optics and Quantum optics Chapter 1 is about the nature of light Geometrical optics is covered in chapters 2 to 5 Physical optics in chapters 6 to 8 and Quantum optics in chapter 9 and lays a foundation for advanced courses in applied quantum optics The language of physics is universal and the book is suited to students globally However the book recognises certain peculiarities in Africa and is written to meet the specific needs of students in African Universities Some students come from well equipped schools while other students come from less well equipped schools These two groups of students attending the same course have different needs The well prepared students need challenge while the others need to

be taught in fair detail The book has therefore detailed discussions and explanations of difficult to grasp topics with the help of simple but clearly drawn and labeled diagrams The discussions and conclusions are presented pointwise and key words definitions laws etc are highlighted There are a large number of problems and exercises at the end of each chapter E-physics Iv Tm (science and Technology)' 2003 Ed. , *Science Made Simple* □ 8 Mansi Punni, Neha Gambhir, A Course Book on Science
