

# PRELAB Lab 7: Reflection and Refraction

## Learning objectives:

- RR4: Apply reflection and refraction concepts to explain how light travels in prisms, fiber optics, and rainbows.

1. Reflecting prisms are used in an optical devices (e.g. binoculars) to reflect light. Explain how the light is reflected when it is glass, and why the prism would be used instead of a mirror. (It may help to review p.796). [+3]

2. In your MasteringPhysics homework due today, the figure below is included in the last problem to explain how rainbows work. To explain how the sunlight disperses into red and purple when it hits the water droplet, do the following:

- a. Draw the normal vector at each point in the diagram where **refraction** is represented. [+1]
- b. Plug reasonable values into Snell's Law to demonstrate why the red light separates from violet light as it enters the water droplet. [+1]

- c. Plug reasonable values into Snell's Law to demonstrate why the red light separates even further from violet light as the light exits the water droplet (and returns to air). [+1]

3. Two glass prisms are arranged as shown. Complete the ray diagrams to show how the light rays would travel through the glass prisms. Include the normal line (dashed) and the rays both in the glass and on the other side (back in air). It does not need to be drawn exactly to scale. [+4]
