CDM Regulations Procedures Manual Stuart D. Summerhayes, 2008-04-15 The Construction Design and Management Regulations require all those involved in construction to adopt an integrated approach to health and safety management. Clients, designers and contractors as well as planning supervisors must now work together to ensure that health and safety management issues are considered throughout all phases of a project. Appropriate procedures must be established to ensure that documentation is clear and a structured approach is adopted by all those involved in a project to ensure that the requirements of the regulations are complied with. This Procedures Manual provides a documentation system which has been developed by a practising planning supervisor. It addresses the full range of obligations of the client, planning supervisor, designer, principal contractor and contractors for compliance with the statutory requirements and features flow charts, checklists, model forms including service agreements, notices and health and safety plans, standard letters and proformas. In addition to providing the necessary documentary record, the Procedures Manual also functions as a control document for quality assurance purposes. The new edition has been revised to take account of Approved Code of Practice for the Regulations.

Design Risk Management Stuart D. Summerhayes, 2010-02-19 The Construction Design and Management Regulations 2007 CDM Regulations 2007 is a revision of a major piece of legislation within the wide portfolio of construction related legislation. It seeks to improve the long term health and safety performance of the UK construction industry with ownership of health and safety proactively undertaken by the integrated project team. Good design has always embraced health and safety issues and design teams remain essential players as well as key contributors and communicators in matters of health and safety management. Designers have a legal responsibility to ensure that their designs account for health and safety at all stages within the holistic envelope of construction. Design Risk Management Contribution to Health and Safety gives detailed guidance to construction practitioners with design responsibility on how to identify and manage health and safety risks and on the design strategies to be followed. It seeks to focus on accountability with due emphasis on the minimisation of unnecessary bureaucracy and offers documentation trails that provide an insight to managing risk and not paperwork. Subsequently, it offers a process by which designers can discharge their duties in compliance with the CDM Regulations.

Construction Health and Safety in Coastal and Maritime Engineering Ian Cruickshank, Stephen Cork, 2005 Over 500 million is spent on coastal and maritime construction in the UK every year This work is particularly hazardous due to the hostile environment and uncertainty caused by the combination of storms waves currents and tides At present there is little health and safety related guidance available to assist coastal maritime clients designers contractors and other stakeholders to ensure this work is undertaken in a safe manner The CDM Regulations amongst others regulations require these parties to consider and assess construction risks

Post-Project Monitoring of BMP's/SUDS to Determine Performance and Whole-Life Costs L. K. Lampe, 2004-06-30 Over the past 20 years the use of Best Management Practices BMPs in the United States has been instrumental in reducing both the detrimental impacts to receiving water quality and the exacerbated flooding caused by urbanization and storm water drainage More recently Sustainable Urban Drainage Systems SUDS have started to be used in the United Kingdom Both SUDS and BMPs attempt to mimic the drainage patterns of the natural watershed and can also provide a degree of treatment needed to improve the quality of the water discharged to an acceptable level The costs of conventional stormwater collection systems are determined primarily in terms of initial capital expenditure Long term maintenance costs are absorbed by stormwater authorities that are responsible for maintaining their infrastructure as part of their asset base Currently only a few of these responsibilities exist for BMPs and SUDS which generally incorporate surface components and are often dependent on landscaping rather than on traditional construction techniques but may require significant regular maintenance Any potential adopting organization will require guidance on the maintenance regimes of different types of systems and how such regimes translate into long term adoption costs The project is being conducted in two phases Phase 1 which is the subject of this report includes a literature review and a survey of stormwater authorities and organizations in the US and UK to identify the most commonly used BMPs and SUDS and to determine the availability of data on their cost and performance As part of Phase 2 the operation of selected BMPs and SUDS will be monitored over a one year period in terms of pollutant removal and hydrologic hydraulic efficiency and applicability of their design criteria and maintenance regime The protocols developed in Phase 1 will be used to assess BMPs SUDS performance and whole life costs
