Parra-Montesinos, 2021-12-07 The ninth edition of this book will be updated to incorporate the changes in the design provisions of the 2019 American Concrete Institute ACI Building Code and Commentary ACI 318 19 As in previous editions considerable emphasis is placed on presenting to the student as well as the practicing engineer the basic principles of analysis and design of reinforced concrete structures Each chapter is organized such that the principles of mechanics are presented first to provide a detailed understanding of the theory and observed behavior of reinforced concrete members This material is then used to describe and to provide the rationale for the design provisions of the ACI Building Code Numerous examples are presented in each chapter to illustrate the concepts as well as the general approach to design and analysis The reader may either study in detail the concepts in logical sequence or merely accept a qualitative explanation and proceed directly to the design process All example problems will be revised and as appropriate new examples will be developed to illustrate the use of available software and design tools currently used in practice *Civil Engineering Problems and*

focusing on this area New techniques involving Near Surface Mounted NSM carbon fibre rods strain hardening composites and new techniques involving the well established carbon fibre and polyimide wrapping and strengthening systems are presented Seventeen papers concentrate on case studies which are all important in such conferences to learn about what works and what doesn't work on real structures Thirteen papers are devoted to new developments in Non Destructive Testing NDT Other topics include service life modelling fire damage surface protection methods and coatings patch repair general repair techniques and whole life costing This book is essential reading for anyone engaged in the concrete repair field from engineers to academics and students and also to clients who as the end user are ultimately responsible for funding these projects and making those difficult decisions about which system or method to use **Civil Engineering License**
