Chapter 13 Practical Calculation Methods for Ultimate Strength of Member and Structure at Elevated Temperature Chapter 14 Fire Resistance Analysis and Damage Grade Evaluation of Structure Reinforced Concrete Designer's Handbook Charles E. Reynolds, James C. Steedman, Anthony J. Threlfall, 2007-08-07 This classic and essential work has been thoroughly revised and updated in line with the requirements of new codes and standards which have been introduced in recent years including the new Eurocode as well as up to date British Standards It provides a general introduction along with details of analysis and design of a wide range of structures and examination of design according to British and then European Codes Highly illustrated with numerous line diagrams tables and worked examples Reynolds s Reinforced Concrete Designer s Handbook is a unique resource providing comprehensive guidance that enables the engineer to analyze and design reinforced concrete buildings bridges retaining walls and containment structures Written for structural engineers contractors consulting engineers local and health authorities and utilities this is also excellent for civil and architecture departments in universities and FE colleges Animal Psychophysics: the design and conduct of sensory experiments William C. Stebbins, 2013-11-21 In May of 1969 the contributors to this book gathered at the University of Michigan in Ann Arbor for three days to talk about their work in the behavioral analysis of animal sensory function and to share their research experiences in the laboratory with particular emphasis on methodology in behavioral training testing and instrumentation It was their feeling and mine as a consequence of this meeting that we had sufficient substance to justify a book which we hoped would be of interest and even of pragmatic value to any biologic or biomedical scientist whose work deals with sensory function Clearly there is no aspect of an organism s behavior that is not to some extent controlled by environmental stimuli In recent years due in large part to technical advances in microscopy and histology and in electrophysiology there have been several extremely informative published proceedings from conferences and symposia concerned with some of the early and very basic stages in the reception of environmental energy by the sense organs and its processing by the nervous system Transduction at the receptor and stimulus coding by the nervous system cell membrane changes and the basic structure of the receptor and related tissue as seen through the electron and phase contrast microscope have received major attention and exciting new discoveries in sensory function and structure have been reported Ultimately such discoveries must be related to an intact behaving organism Reinforced Concrete Chimneys Clifford W.
