Best practice guidelines for the rehabilitation and translocation of gibbons International Union for the Conservation of Nature and Natural Resources (IUCN), Clare O. Campbell, Susan M. Cheyne, Benjamin M. Rawson, 2015-05-28 Rehabilitation and translocation programmes are increasingly becoming an important component of conservation action plans for threatened species Translocation can help address gibbon conservation issues gibbons are recognized as one of the most threatened primate families globally by allowing gibbons held in captivity to be rescued rehabilitated and then returned to the wild These guidelines for the translocation of gibbons have been developed in collaboration with stakeholders in hylobatid conservation This process was initiated during a workshop on gibbon rehabilitation reintroduction and translocation facilitated by the IUCN SSC PSG Section on Small Apes SSA and the result of this process is the current document which is based on shared

knowledge and experience to date The guidelines are designed to be a practical and useful document available for all stakeholders with the aim of equipping field projects and decision makers with the tools for scientifically sound practice in gibbon rehabilitation and translocation *Monthly Catalog of United States Government Publications, Cumulative Index* United States. Superintendent of Documents, 1976 **Research in Education**, 1974 *Theoretical Aspects of Evolutionary Computing* Leila Kallel, Bart Naudts, Alex Rogers, 2013-03-09 During the first week of September 1999 the Second EvoNet Summer School on Theoretical Aspects of Evolutionary Computing was held at the Middelheim campus of the University of Antwerp Belgium Originally intended as a small get together of PhD students interested in the theory of evolutionary computing the summer school grew to become a successful combination of a four day workshop with over twenty researchers in the field and a two day lecture series open to a wider audience This book is based on the lectures and workshop contributions of this summer school Its first part consists of tutorial papers which introduce the reader to a number of important directions in the theory of evolutionary computing The tutorials are at graduate level and assume only a basic background in mathematics and computer science No prior knowledge of evolutionary computing or its theory is necessary The second part of the book consists of technical papers selected from the workshop contributions A number of them build on the material of the tutorials exploring the theory to research level Other technical papers may require a visit to the library **Adaptive Individuals In Evolving Populations** Richard K. Belew, 2018-05-04 This book is out of a workshop organized to address questions like these The meeting was sponsored by the Santa Fe Institute and held at Sol y Sombra in Santa Fe New Mexico during July 1993 It brought together a group of about 20 scientists from the disciplines of biology psychology and computer science all studying interactions between the evolution of populations and individuals adaptations in those populations and all of whom make some use of computational tools in their work *Human Infancy* Daniel G. Freedman, 2016-07-07 Originally published in 1974 this volume is primarily devoted to what is known about human infancy from an ethological evolutionary viewpoint Included are discussions of pan specific traits presumably shared by all infants individual genetic variations on these behaviours as judged by twin studies sex differences presumably shared by infants of all ethnic groups and genetically based ethnic differences However the author favours neither biological determinism nor cultural determinism and does not consider interactionism to be a viable solution Instead a monistic position is taken stressing the inseparability of the innate and the acquired of genetics and environment and of biology and culture The heredity environment issue is tackled head on throughout the volume The interaction between the two an implied dualism is described as a statistical abstraction from measured populations while the position here is that heredity and environment are not separable in any single organism In the same vein the author argues that on logical grounds everything one does every cultural act has within it some biological component **Sustainable Utilization and Conservation of Plant Genetic Diversity** Jameel M Al-Khayri, Shri Mohan Jain, Suprasanna Penna, 2024-03-28 This book collates a wide spectrum of topics

relevant to contemporary research achievement in sustainable utilization of plant genetic resources and conservation of plant genetic diversity within the framework of different crop systems It introduces the status of crop genetic diversity and provides prospects for conservation of crop genetic diversity for sustainable agriculture Plant genetic diversity is crucial for food security and agro ecosystem maintenance paving ways to achieve sustainable agriculture development This necessitates consciously and judiciously the conservation of all existing plant genetic resources for sustainable use in a variety of applications for human welfare The wild and traditional landraces have generated an increased interest as a repertoire of valuable traits for breeding and improvement of cultivated germplasm Internationally concerted actions and policies toward for the conservation and management of plant genetic diversity are mounting from the organization levels to national policies as deemed appropriate for the sustainable development goals This needs an understanding of genetic diversity of different crops ecological drivers and the structural changes within genetic diversity due to climate change It is also equally important to evolve knowledge on what how and where to conserve the existing plant genetic resources for present and future use Assessment of the genetic diversity presents in a wild and traditional agro ecosystem is another step towards effective utilization In the past few years advanced breeding tools have been developed which have offered great promise for efficient modification of targeted traits This book consolidates current knowledge in the above core areas of plant genetic diversity and conservation It is an essential reference for professionals researchers policy makers and commercial entrepreneurs concerned with plant genetic diversity and breeding to achieve enhanced agricultural productivity and sustainability of food resources to ensure food security The book is also invaluable for graduate students involved in agriculture research Plant Resource Utilization and Conservation Mr. Rohit Manglik, 2024-07-03 EduGorilla Publication is a trusted name in the education sector committed to empowering learners with high quality study materials and resources Specializing in competitive exams and academic support EduGorilla provides comprehensive and well structured content tailored to meet the needs of students across various streams and levels
