✓ Exclusively available on IvyPanda

The word 'love' is observed to have distinct meanings in various settings and contexts. Different people from various cultural settings would tend to have different perceptions about love. Generally, love refers to some kind of inexplicable feeling which is felt by people towards others, probably those of the opposite sex. Relationship on the other hand would refer to the condition of people being connected or associated with each other.

We have all experienced love at one moment of life, but it is as though there is still much we don't know about love itself. Humans have always asked inexplicable questions about love such as, "Why do we fall in love?" or "What makes us love others?" Sometimes, these perceptions may match with the perceptions of another person and in that case love is certain to be realized.

Different groups of people have different views about love. Some communities would see it as something that would be contained in the eyes while others just associate it with blood thus the observations 'love is in the eyes of the beholder' and 'blood is thicker than water' respectively.

However, some aspects in life have come up to disqualify these perceptions, making people to search for other alternative explanations. For instance, let us consider the situation of blind people. Does their incapability to see hinder them from loving? More importantly, if love was really contained in the blood, will there be any cases concerning lost identities in life as we can see today?

Having asked ourselves these questions, it would be easy for us to appreciate the psychological view of love that is determined by our minds as the perfect answer to most of the questions we frequently ask ourselves regarding love. The issue of love and what makes people fall in love has been a subject of debate all over the world for a very
