**Defending Biodiversity** Jonathan A. Newman,Gary Varner,Stefan Linquist,2017-10-05 Imagine that you are an environmentalist who passionately believes that it is wrong to drill for oil in the Arctic National Wildlife Refuge How do you convince someone that a decision to drill is wrong Debates about the environment and how humans ought to treat it have gone on for decades yet arguments in favor of preserving biodiversity often lack empirical substance or are philosophically naive making them far less effective than they could be This book critically examines arguments that are commonly offered in support of biodiversity conservation The authors adopt a skeptical viewpoint to thoroughly test the strength of each

argument and by demonstrating how scientific evidence can be integrated with philosophical reasoning they help environmentalists to better engage with public debate and judiciously inform public policy This interdisciplinary and accessible book is essential reading for anyone who engages in discussions about the value of biodiversity conservation

### **Urbanization and Affordances that Promote Well-Being for (Urban) People and for a Healthy Biosphere**

Stephan Barthel, Marketta Kyttä, 2020-01-30 The world is urbanizing at an unprecedented rate It is estimated that in the near future urban landscapes for another ca 2 7 billion people will be built on planet Earth approximately converting land equivalent to the size of South Africa Such land conversion coupled with citizen densification increasing in equalities shifting diets and emerging technologies challenge human well being and pose ever increasing demand for resources generated by the Biosphere This Research Topic concentrates on the various ways urbanization can promote individual well being mental

physical and social health as well as ecological health a healthy Biosphere What kind of affordances for human health promotion can urbanization include What kinds of affordances for a psychological connection with nature can urbanization include What kinds of nudges for pro environmental behavior and consumption decreasing detrimental consumption behaviors can be actively designed in urban settings The Research Topic at hand uses a transactional approach where an affordance can be understood as a non deterministic in situ precondition for a human activity enabled by relations between abilities of an individual with features of an environment We encourage a broad definition of the concept of affordances where the environment must not be restricted to the material biophysical environment alone but also could be combined with social immaterial features We see that the transactional approach of this Research Topic posits that meaning arises in relations between humans and their environment that it will be equally applicable to natural and designed environments and that it doesn't regard dichotomies like city contra nature or social contra ecological Hence this Research Topic is interested in if the transactional approach can be used as a conceptual tool not only for promotion of mental physical and social health in cities but simultaneously for unraveling relations at the micro scale in cities which can be used for solutions that also promote a healthy Biosphere
