Regulation of Agricultural Biotechnology Springer, 2012-10-07 Regulation of Agricultural Biotechnology: The United States and Canada Chris A. Wozniak, Alan McHughen, 2012-10-05 Agricultural biotechnology takes many forms and applications with the number and diversity of products ever increasing With this rapid development regulatory authorities have sought to keep pace through regulatory adjustments and advances to ensure the safe and beneficial use of this critical technology The regulatory systems for the U S and Canada are not static and must evolve in order to maintain relevance efficiency and applicability to the challenges encountered The diverse authors drawn from the biotechnology industry academia government research and regulatory agencies offer their perspectives of the historical and current system and suggest where it can be improved in the future Based upon vast experience interacting with the regulatory system the editors and authors offer demystifying views of the US and Canadian regulatory structures and how they came to be We know of no other effort to present the biotechnology regulatory systems of the US and Canada in an open forum which will benefit those in the regulated community as well as those charged with oversight of the products of biotechnology and ultimately the consumer

East vs. West Hugh Dang, Brad Gilmour, Jennifer Ma, 2019-12-19 This book explores international development contrasting the Eastern and Western experiences It shows that in the East the Chinese experience has in recent years become shorthand for economic development and internationalization China continues to build its society on an agricultural basis while simultaneously adapting to technological and institutional innovations The volume highlights that in global societies both capitalistic and communistic the nature of innovation has increasingly come to influence individual and common lives It traverses the architecture journey in India and bestows a clarity on the directions still to be taken

NAFTA and Sustainable Development Hoi L. Kong, L. Kinvin Wroth, 2015-08-07 The North American Free Trade Agreement NAFTA and its companion agreement the North American Agreement on Environmental Cooperation NAAEC provide important and often underappreciated protection for the environmental laws of the Party states Canada Mexico and the United States On the twentieth anniversary of NAFTA s ratification this book assesses the current state of environmental protection under those agreements Bringing together scholars practitioners and regulators from all three Party states it outlines the scope and process of NAFTA and NAAEC their impact on specific environmental issues and paths to reform It includes analyses of the impact of the agreements on such matters as bioengineered crops in Mexico assessment of marine environmental effects potential lessons for China climate change and indigenous rights Together the chapters of this book represent an important contribution to the global conversation concerning international trade agreements and

sustainable development Genetically Engineered Crops National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Board on Agriculture and Natural Resources, Committee on Genetically Engineered Crops: Past Experience and Future Prospects, 2017-01-28 Genetically engineered GE crops were first introduced commercially in the 1990s. After two decades of production, some groups and individuals remain critical of the technology based on their concerns about possible adverse effects on human health, the environment, and ethical considerations. At the same time, others are concerned that the technology is not reaching its potential to improve human health and the environment because of stringent regulations and reduced public funding to develop products offering more benefits to society. While the debate about these and other questions related to the genetic engineering techniques of the first 20 years goes on, emerging genetic engineering technologies are adding new complexities to the conversation. Genetically Engineered Crops builds on previous related Academies reports published between 1987 and 2010 by undertaking a retrospective examination of the purported positive and adverse effects of GE crops and to anticipate what emerging genetic engineering technologies hold for the future. This report indicates where there are uncertainties about the economic, agronomic, health, safety, or other impacts of GE crops and food and makes recommendations to fill gaps in safety assessments, increase regulatory clarity, and improve innovations in and access to GE technology.

Biobased Products and Industries Charis M. Galanakis, 2020-01-23 *Biobased Products and Industries* fills the gap between academia and industry by covering all the important aspects of biobased products and their relevant industries in one single reference. Highlighting different perspectives of the bioeconomy, EU relevant projects, as well as the environmental impact of biobased materials and sustainability, the book covers biobased polymers, plastics, nanocomposites, packaging materials, electric devices, biofuels, textiles, consumer goods, and biocatalysis for the decarboxylation and decarboxylation of biobased molecules, including biobased products from alternative sources, algae, and the biobased production of chemicals through metabolic engineering. Focusing on the most recent advances in the field, the book also analyzes the potentiality of already commercialized processes and products. Highlights the important aspects of biobased products as well as their relevant industries in one single reference. Focuses on the most recent advances in the field, analyzing the potentiality of already commercialized processes and products. Provides an ideal resource for anyone dealing with bioresource technology, biomass valorization, and new products development.

Handbook on Agriculture, Biotechnology and Development Stuart J. Smyth, Peter W.B. Phillips, David Castle, 2014-03-28 This book is a compendium of knowledge, experience, and insight on agriculture, biotechnology, and development. Beginning with an account of GM crop adoptions and attitudes towards them, the book assesses numerous crucial processes, concluding with detail.

The Regulation of Agricultural Biotechnology Robert E. Evenson, V. Santaniello, 2004-03-29 The regulatory systems in place prior to the development and expansion of agricultural biotechnology are still responding to this new form of technology. Such systems include trade law, intellectual property law,

contract law environmental regulations and biosafety regulations This book reviews these regulatory changes and consists of 24 chapters developed from papers presented at a conference of the International Consortium on Agricultural Biotechnology Research held in Italy in July 2002 It primarily considers the relationship between these changes and innovation market development and international trade Corporate Crops Gabriela Pechlaner, 2012-12-01 Biotechnology crop production area increased from 17 million hectares to 148 million hectares worldwide between 1996 to 2010 While genetically modified food is a contentious issue the debates are usually limited to health and environmental concerns ignoring the broader questions of social control that arise when food production methods become corporate owned intellectual property Drawing on legal documents and dozens of interviews with farmers and other stakeholders Corporate Crops covers four case studies based around litigation between biotechnology corporations and farmers Pechlaner investigates the extent to which the proprietary aspects of biotechnologies from patents on seeds to a plethora of new rules and contractual obligations associated with the technologies are reorganizing crop production The lawsuits include patent infringement litigation launched by Monsanto against a Saskatchewan canola farmer who in turn claimed his crops had been involuntarily contaminated by the company's GM technology a class action application by two Saskatchewan organic canola farmers launched against Monsanto and Aventis later Bayer for the loss of their organic market due to contamination with GMOs and two cases in Mississippi in which Monsanto sued farmers for saving seeds containing its patented GM technology Pechlaner argues that well funded corporate lawyers have a decided advantage over independent farmers in the courts and in creating new forms of power and control in agricultural production Corporate Crops demonstrates the effects of this intersection between the courts and the fields where profits not just a food supply are reaped

The Neoliberal Diet Gerardo Otero, 2018-10-03 Why are people getting fatter in the United States and beyond

Mainstream explanations argue that people simply eat too much energy dense food while exercising too little. By swapping the chips and sodas for fruits and vegetables and exercising more the problem would be solved. By contrast, The Neoliberal Diet argues that increased obesity does not result merely from individual food and lifestyle choices. Since the 1980s the neoliberal turn in policy and practice has promoted trade liberalization and retrenchment of the welfare regime along with continued agricultural subsidies in rich countries. Neoliberal regulation has enabled agribusiness multinationals to thrive by selling highly processed foods loaded with refined flour and sugars, a diet that originated in the United States as well as meat. Drawing on extensive empirical data, Gerardo Otero identifies the socioeconomic and political forces that created this diet, which has been exported around the globe, often at the expense of people's health. Otero shows how state level actions, particularly subsidies for big farms and agribusiness, have ensured the dominance of processed foods and made healthful fresh foods inaccessible to many. Comparing agrifood performance across several nations, including the NAFTA region, and correlating food access to class inequality, he convincingly demonstrates the structural character of food production and the effect of inequality on individual food choices. Resolving the global obesity crisis, Otero concludes, lies not in blaming individuals but in creating state level programs to reduce inequality and make healthier food accessible to all.
