*Cut-and-Paste Genetics* Sahotra Sarkar, 2021-09-15 The emergence of CRISPR Cas9 technology has revolutionized gene editing The Nobel prize for chemistry was awarded to Emmanuelle Charpentier and Jennifer Doudna the scientists responsible for its discovery in 2020 and it is considered the frontier of sophisticated medical science This technology contains the promise that both gene therapy and eugenic control of human evolution is possible even plausible in our near future This book looks at these developments in the context of the history of previous social and scientific attempts at genetic editing and explores the policy and ethical challenges they raise It presents the case for altering the human germ line which contains and controls hereditary genetic information to eliminate a large number of genetic diseases controlled by a single or few genes while pointing out that gene therapy is likely to be ineffective for diseases with more complex causes In parallel it explores the possibility of genetic enhancement in a set of case studies But it also argues that in general genetic enhancement is ethically problematic and should be approached with caution Given the success of CRISPR Cas9 gene editing and the explosion of related techniques in practice it would be virtually impossible to ban germ line editing in our future A more useful goal is to put regulation in place with oversight that represents the interests of society That in turn requires an informed public discussion of these issues which is the intention of this book **The School Science Review**, 2000

**DeGarmo's Materials and Processes in Manufacturing** J. T. Black, Ronald A. Kohser, 2020-07-21 Guiding engineering and technology students for over five decades DeGarmo's Materials and Processes in Manufacturing provides a comprehensive introduction to manufacturing materials systems and processes Coverage of materials focuses on properties and behavior favoring a practical approach over complex mathematics analytical equations and mathematical models are only presented when they strengthen comprehension and provide clarity Material production processes are examined in the context of practical application to promote efficient understanding of basic principles and broad coverage of manufacturing processes illustrates the mechanisms of each while exploring their respective advantages and limitations Aiming for both accessibility and completeness this text offers introductory students a comprehensive guide to material behavior and selection measurement and inspection machining fabrication molding fastening and other important processes using plastics ceramics composites and ferrous and nonferrous metals and alloys This extensive overview of the field gives students a solid foundation for advanced study in any area of engineering manufacturing and technology DeGarmo's Materials and Processes in Manufacturing Ronald A. Kohser, Peter C. Collins, J. T. Black, 2024-12-31 Classic textbook introducing key concepts in manufacturing with a focus on practical applications updated to include the latest industry developments For over 65 years DeGarmo's Materials and Processes in Manufacturing has comprehensively presented both traditional and new manufacturing materials processes and systems in a descriptive non mathematical manner Students are first introduced to a range of engineering materials including metals plastics and polymers ceramics and composites The processes used to

convert this stuff into things are then described along with their typical applications capabilities and limitations Segments cover casting forming machining welding and joining and additive manufacturing Supporting chapters present concepts relating to material selection heat treatment surface finishing measurement inspection and manufacturing systems The Fourteenth Edition has been updated to reflect the most current technologies Coverage of additive manufacturing 3D printing has been significantly expanded along with updates on new and advanced materials Case studies are featured throughout the book and review problems have been placed at the end of each chapter A full collection of online bonus material is provided for both students and instructors DeGarmo s Materials and Processes in Manufacturing Fourteenth Edition includes information on Equilibrium phase diagrams and the iron carbon system heat treatment and process capability and quality control Expendable mold and multiple use mold casting processes powder metallurgy particulate processing fundamentals of metal forming and bulk forming and sheet forming processes Cutting tool materials turning and boring processes milling drilling and related hole making processes and CNC processes and adaptive control in the A 4 and A 5 levels of automation Sawing broaching shaping and filing machining processes thread and gear manufacturing and surface integrity and finishing processes DeGarmo s Materials and Processes in Manufacturing has long set the standard for introducing students to the materials and processes in product manufacturing and has been incorporated in programs of manufacturing mechanical industrial metallurgical and materials engineering as well as various technology degrees Its descriptive nature provides an excellent first exposure to its various subjects which may then be followed by advanced courses in specific areas
