

The graphs of  $g(x)$  are drawn on the grids. Sketch the graph of  $f(x)$  on the same grid as  $g(x)$ .

7.  $f(x) = x^3 + 2x^2 + 3$

$g(x) = x^3 + 2x^2$

8.  $f(x) = x^3 - 4x^2 - 3$

$g(x) = x^3 - 4x^2$

9.  $f(x) = -x^4 + 2x^3$

$g(x) = x^4 - 2x^3$

10.  $f(x) = 2(x^4 - 3x^2)$

$g(x) = x^4 - 3x^2$

11.  $f(x) = \frac{1}{2}(x^5 - 3x^4)$

$g(x) = x^5 - 3x^4$

**Discovering Mathematics with Maple** R.J. Stroeker, J.F. Kaashoek, 2012-12-06 his book grew out of the wish to let students of econometrics get acquainted with the powerful techniques of computer algebra at an early stage in their curriculum As no textbook available at the time met our requirements as to content and presentation we had no other choice than to write our own course material The try out on a group of 80 first year students was not without success and after adding some necessary modifications the same material was presented to a new group of students of similar size the year after Some more adjustments were made and the final result now lies before you Working with computer algebra packages like Derive Mathematica and Maple over many years convinced us of the favourable prospects of computer algebra as a means of improving the student's understanding of the difficult concepts on which mathematical techniques are often based Moreover advanced mathematical education be it for mathematics itself or for mathematical statistics operations research and other branches of applied mathematics can greatly profit from the large amount of non trivial mathematical knowledge that is stored in a computer algebra system Admittedly the fact remains that many a tough mathematical problem such as solving a complicated non linear system or obtaining a finite expression for a multiple parameter integral can not easily be handled by computer algebra either if at all

*Design of Experiments With Minitab* Paul G. Mathews, 2004-07-07 Most of the classic DOE books were written before DOE software was generally available so the technical level that they assumed was that of the engineer or scientist who had to write his or her own analysis software In this practical introduction to DOE guided by the capabilities of the common software packages Paul Mathews presents the basic types and methods of designed experiments appropriate for engineers scientists quality engineers and Six Sigma Black Belts and Master Black Belts Although instructions in the use of Minitab are detailed enough to provide effective guidance to a new Minitab user the book is still general enough to be very helpful to users of other DOE software packages Every chapter contains many examples with detailed solutions including extensive output from Minitab
