**Multi-Criteria Decision Making in Maritime Studies and Logistics** Paul Tae-Woo Lee, Zaili Yang, 2017-10-24 This  
 book describes a wide range real case applications of Multi Criteria Decision Making MCDM in maritime related subjects  
 including shipping port maritime logistics cruise ports waterfront developments and shipping finance etc In such areas  
 researchers students and industrialists in general felt struggling to find a step by step guide on how to apply MCDM to  
 formulate effective solutions to solving real problems in practice This book focuses on the in depth analysis and applications  
 of the most well known MDCM methodologies in the aforementioned areas It brings together an eclectic collection of twelve  
 chapters which seek to respond to these challenges The book begins with an introduction and is followed by an overview of  
 major MCDM techniques The next chapter examines the theory of analytic hierarchy process AHP in detail and investigates a  
 fuzzy AHP FAHP approach and its capability and rationale in dealing with decision problems of ambiguous information  
 Chapter 4 proposes a generic methodology to identify the key factors influencing green shipping and to establish an  
 evaluation system for the assessment of shipping greenness In Chapter 5 the authors describe a new function of fuzzy  
 Evidential Reasoning ER to improve the vessel selection process in which multiple criteria with insufficient and ambiguous  
 information are evaluated and synthesized Chapter 6 presents a novel methodology by using an Artificial Potential Field APF  
 model and the ER approach to estimate the collision probabilities of monitoring targets for coastal radar surveillance Chapter  
 7 develops the inland port performance assessment model IPPAM using a hybrid of AHP ER and a utility function The next  
 chapter showcases a challenging approach to address the risk and uncertainty in LNG transfer operations by utilizing a  
 Stochastic Utility Additives UTA method with the help of the philosophy of aggregation disaggregation coupled with a  
 robustness control procedure Chapter 9 uses Entropy and Grey Relation Analysis GRA to analyze the relative weights of

financial ratios through the case studies of the four major shipping companies in Korea and Taiwan Evergreen Yang Ming Hanjin and Hyundai Merchant Marine Chapter 10 systemically applies modern heuristics to solving MCDM problems in the fields of operation optimisation in container terminals Arguing that bunkering port selection is typically a multi criteria group decision problem and in many practical situations decision makers cannot form proper judgments using incomplete and uncertain information in an environment with exact and crisp values in Chapter 11 the authors propose a hybrid Fuzzy Delphi TOPSIS based methodology with a sensitivity analysis Finally Chapter 12 deals with a new conceptual port performance indicators PPIs interdependency model using a hybrid approach of a fuzzy logic based evidential reasoning FER and a decision making trial and evaluation laboratory DEMATEL **Marine Pollution Control** Iliana
