

A particle P lies on a slope inclined at 30° to the horizontal. P is attached to one end of a taut light inextensible string which passes through a small smooth ring Q of mass m kg. The portion PQ of the string is horizontal and the other portion of the string is inclined at 40° to the vertical. A horizontal force of magnitude H N, acting away from P , is applied to Q (see diagram). The tension in the string is 6.4 N, and the string is in the vertical plane containing the line of greatest slope on which P lies. Both P and Q are in equilibrium.

(i) Calculate m . [2]

(ii) Calculate H . [2]

(iii) Given that the weight of P is 32 N, and that P is in limiting equilibrium, show that the coefficient of friction between P and the slope is 0.879 , correct to 3 significant figures. [6]

Q and the string are now removed.

(iv) Determine whether P remains in equilibrium. [3]
