Language Technology for Cultural Heritage Caroline Sporleder, Antal van den Bosch, Kalliopi Zervanou, 2011-07-07 The

digital age has had a profound effect on our cultural heritage and the academic research that studies it. Staggering amounts of objects, many of them of a textual nature, are being digitised to make them more readily accessible to both experts and laypersons. Besides a vast potential for more effective and efficient preservation management and presentation, digitisation offers opportunities to work with cultural heritage data in ways that were never feasible or even imagined. To explore and exploit these possibilities, an interdisciplinary approach is needed, bringing together experts from cultural heritage, the social sciences and humanities on the one hand, and information technology on the other. Due to a prevalence of textual data in these domains, language technology has a crucial role to play in this endeavour. Language technology can break through the Google barrier by offering the potential to analyse texts at advanced levels, extracting information and knowledge at the level of the humanities or social sciences researcher who wants to know about the who, what, where, and when, but also the how and the why. At the same time, cultural heritage data poses considerable challenges for existing language technology. Technology aimed at generic language has to face such disparate problems as historical language variation, OCR digitisation errors, and near-extinct academic expertise. This book is primarily intended for researchers in information technology and language processing who would like to receive a state-of-the-art overview of the whole breadth of the new and vibrant field of language technology for cultural heritage and its associated academic research in the humanities and social sciences. Researchers working in the target domains of cultural heritage, the social sciences and humanities will also find this book useful as it provides an overview of how language technology can help them with their information needs. The book covers applications ranging from pre-processing and data cleaning to the adaptation and compilation of linguistic resources to personalisation, narrative analysis, visualisation, and retrieval.
