

Chapter 1 Introduction

Chapter 1 provides a brief introduction to the subject of computer science. The chapter is divided into two main sections: the first section discusses the history of computer science, and the second section discusses the current state of the field. The chapter also includes a list of key terms and a list of references.

The first section, "History of Computer Science," discusses the origins of the field and the development of the computer. It covers the early days of mechanical computing, the development of the electronic computer, and the rise of the personal computer. It also discusses the impact of the computer on society and the economy.

The second section, "Current State of the Field," discusses the current state of computer science research and development. It covers the development of new hardware and software technologies, the use of computers in industry and science, and the impact of the computer on society and the economy.

The chapter concludes with a list of key terms and a list of references. The key terms include: computer, hardware, software, algorithm, data, and network. The references include: "The History of Computing" by Charles Babbage, "The Computer Revolution" by Mark Weiser, and "The Future of Computing" by Peter Dinkler.

Global Trade and the Dollar Ms. Emine Boz, Gita Gopinath, Mikkel Plagborg-Møller, 2017-11-13 We document that the U S dollar exchange rate drives global trade prices and volumes Using a newly constructed data set of bilateral price and volume indices for more than 2 500 country pairs we establish the following facts 1 The dollar exchange rate quantitatively dominates the bilateral exchange rate in price pass through and trade elasticity regressions U S monetary policy induced dollar fluctuations have high pass through into bilateral import prices 2 Bilateral non commodities terms of trade are essentially uncorrelated with bilateral exchange rates 3 The strength of the U S dollar is a key predictor of rest of world aggregate trade volume and consumer producer price inflation A 1 percent U S dollar appreciation against all other currencies in the world predicts a 0 6 0 8 percent decline within a year in the volume of total trade between countries in the rest of the world controlling for the global business cycle 4 Using a novel Bayesian semiparametric hierarchical panel data model we estimate that the importing country's share of imports invoiced in dollars explains 15 percent of the variance of dollar pass through elasticity across country pairs Our findings strongly support the dominant currency paradigm as opposed to the traditional Mundell Fleming pricing paradigms
