*The Ocean, Volume 4* Hervé Claustre, Carolyn Scheurle, Laura Lorenzoni, Sanae Chiba, Emily King, 2024-02-13 The ocean allowed life to develop on earth billions of years ago it is vital for all of us and it will guarantee the future of humanity The ocean is vast deep harsh and somehow rebellious to reveal its secrets and hence there is much that is unexplored and not yet understood Scientists need to study the ocean to better understand its functioning its properties as well as how it shapes our environment and impacts us For example do you know what the role of the ocean is on weather and climate There also remains so much to explore and investigate as diverse oceanic resources fish stocks bio molecules renewable energies but also minerals oil and gas How can we make sure that our use of these resources is respectfully done and sustainable and how can we minimize our impacts e g pollution acidification deoxygenation on the ocean as our human population increases In this Collection of Frontiers for Young Minds ocean scientists from various disciplines explain recent discoveries or fundamental concepts They share their knowledge and motivations and give insights into innovative tools and methods used to better understand our ocean The Collection targets a large range of oceanic environments from the open ocean to the shores the surface to the abysses including specific areas like coral reefs It also targets the connections of the ocean with its interfaces atmosphere ice coast It seeks to cover marine disciplines that range from physics to chemistry from biology and genomics to biodiversity and ecology and from economy to conservation and policies Finally it encompasses a great variety of scales ranging from the diel to geological time scales from loco regional to global scales and also from the tiniest cells to the biggest living animals on our planet The United Nations have declared the 2021 2030 period as the Decade of Ocean Science for Sustainable Development stressing the urgent need to approach fundamental issues related to the ocean and the future of humanity on well sounded scientific grounds and knowledge The oceanic sciences are indeed undertaking a revolution thanks in particular to robotization and the massive intrusion of big data and artificial intelligence This Ocean Collection aims to accompany this evolution to provide information to young readers that will help them to increase their understanding of the ocean and its central role in nature and our lives We hope

to empower them to make informed decisions in these challenging times and to engage to protect study and enjoy its richness

**Antarctica and the Southern Ocean** Nicholas Golledge, Eileen Hofmann, Marilyn Raphael, Letizia Tedesco, 2024-06-26 Antarctica is our southernmost continent. It is nearly double the size of Australia. Antarctica is covered almost entirely by land ice called the Antarctic Ice Sheet and is surrounded by the Southern Ocean. The Southern Ocean influences climate by taking up heat and carbon dioxide from the atmosphere and storing it in deep waters. The cloud processes and aerosols over the Southern Ocean are complex and are important challenges for climate models. To understand the climate of the past, polar scientists drill ice cores through the Antarctic Ice Sheet. The ice core is a powerful tool that we can use to determine how the Earth's climate has changed and the information provided by historical ice cores has become extremely valuable for predicting the future scenarios of our planet. This ice is the largest reservoir of fresh water on Earth. The Antarctic Ice Sheet flows down into the Southern Ocean where parts of it start to float. These large floating platforms of ice are called ice shelves. Knowledge of the sensitivity and interaction of ice shelves to changes in atmosphere and ocean is important to understand the contribution of Antarctica to global sea level rise and the Southern Ocean and global marine ecosystems. If melted, the Antarctic Ice Sheet would be a major contributor to global sea level rise. In winter, the surface of the ocean around Antarctica freezes and sea ice forms. At the height of winter, the area of sea ice that forms is as large as Antarctica itself, but it melts back to the continent every summer. The amount of sea ice that forms in winter and melts back each summer is different. We examine this annual fluctuation of sea ice area around Antarctica for indications of climate change. Sea ice provides important habitats for primary producers such as sea ice algae and Antarctic krill, a keystone species of the Southern Ocean ecosystem. Sea ice is also an important habitat for penguins and seals. This collection aims to inform young readers about fundamental knowledge and digested cutting edge science that will help increase their understanding of Antarctica and its central role as a global climate driver. In addition to the Editors hosting, we would acknowledge the coordination and organization efforts of Pat Wongpan.

***Toilers of the Sea*** Victor Hugo, 2024-05-09 A new translation from the original French manuscripts of Victor Hugo's classic 1866 *Toilers of the Sea* (*Les Travailleurs de la mer*). *Toilers of the Sea* is a sweeping epic novel that explores the themes of heroism, sacrifice, and redemption through the story of a fisherman who battles the forces of nature to save his island home. The book is notable for its vivid descriptions of the sea and its portrayal of the inner turmoil of the protagonist. It is considered one of Hugo's most accomplished works and a classic of French literature. The novel is a dedication and homage to the isle of Guernsey and its people where Hugo spent 15 years of his life while in exile.
