Cellular Obsession: How Smartphones, and the Internet of Things Are Going to Change Your Life Nick Vulich,2017-08-06 Mobile Will Change Everything Again George Orwell s paranoid vision of 1984 is here Only it isn t Big Brother who is watching us It s Big Data Here s the deal Google Apple and Microsoft are all attempting to do the same thing They are trying to get your device to learn enough about you so it can anticipate what you want to do next and provide the appropriate information just as you need it Rafe Needleman described it best in an article he authored for Yahoo Tech He said artificial intelligence will be somewhat like auto correct Your smartphone will auto suggest what you should do next based on your history To do that your smartphone would draw on your prior browsing history and what it knows about you from your GPS location services your

text messages and your emails The hard part is getting your phone to think contextually As human beings we can put things in context based on what s happening now For example let s say you are sitting in your house You smell something burning and see smoke coming from the kitchen The next thing you know the smoke alarm goes off Most people can put two and two together to determine something is wrong They understand that maybe the house is on fire A normal person is either going to check it out or dial 9 1 1 and run out of the house screaming fire Here s a tougher one Let s say you have an appointment set to replace your windshield at 9 15 The Glass Barn texts you to say they are running an hour behind schedule Is that okay Or would you like to reschedule That text is buried among several other messages Most of them are junk A coupon for a dollar off a sandwich free drinks at the bar down the street and a contest entry Which messages should your phone hide or display Most people would say the message from the Glass Barn should be displayed first because it s more urgent But how do you teach a chunk of metal and memory chips to make that decision That s the real challenge When contextual intelligence works it s amazing The problem is that right now your phone gets it right less than a third of the time Google is working hard to improve on that number Their future depends on getting it right Time Magazine ran an article by Victor Lukerson a while back titled Google Searches for Its Future The premise was it s a whole new world out there Google became the go to search engine because of their excellence in desktop search but mobile has changed everything If Google wants to survive they need to reinvent themselves The future is mobile and Google has determined the only way they can survive in this new reality is to focus in onvoice search and Google Now Want to know more Buy the book Lean why cellular is the future of everything
