Application to Industrial Statistics Galit Shmueli,2000-06-01 Various procedures that are used in the field of industrial statistics include switching stopping rules between different levels of inspection These rules are usually based on a sequence of previous inspections and involve the concept of runs A run is a sequence of identical events such as a sequence of successes in a slot machine However waiting for a run to occur is not merely a superstitious act In quality control as in many

other fields e g reliability of engineering systems DNA sequencing psychology ecology and radar astronomy the concept of runs is widely applied as the underlying basis for many rules Rules that are based on the concept of runs or run rules are very intuitive and simple to apply for example use reduced inspection following a run of 5 acceptable batches In fact in many cases they are designed according to empirical rather than probabilistic considerations Therefore there is a need to investigate their theoretical properties and to assess their performance in light of practical requirements In order to investigate the properties of such systems their complete probabilistic structure should be revealed Various authors addressed the occurrence of runs from a theoretical point of view with no regard to the field of industrial statistics or quality control The main problem has been to specify the exact probability functions of variables which are related to runs This problem was tackled by different methods especially for the family of order k distributions some of them leading to expressions for the probability function In this work we present a method for computing the exact probability functions of variables which originate in systems with switching or stopping rules that are based on runs including k order variables as a special case We use Feller s 1968 methods for obtaining the probability generating functions of run related variables as well as for deriving the closed form of the probability function from its generating function by means of partial fraction expansion We generalize Feller s method for other types of distributions that are based on runs and that are encountered in the field of industrial statistics We overcome the computational complexity encountered by Feller for computing the exact probability function using efficient numerical methods for finding the roots of polynomials simple recursive formulas and popular mathematical software packages e g Matlab and Mathematica We then assess properties of some systems with switching stopping run rules and propose modifications to such rules

The West Indian Language Issue in British Schools (1979) Viv Edwards,2017-09-29 First published in 1979 The performance of West Indian children in British schools has been the subject of enquiries by both a parliamentary select committee and the Department of Education It is widely believed that an important factor in the relative failure of West Indian children is the language they use West Indian Creole and while teachers and others who work with them are aware that their language is often very different from British English they seldom understand the nature of the differences or their implications The aim of this book is to provide the non specialist with an account of the language of West Indian children and to examine how linguistic interference can affect their level of reading writing and understanding even when they have been born in Britain It also considers the worrying possibility that negative attitudes towards them and their language may have an adverse effect on their motivation to learn standard English Viv Edwards places great stress on the fact that although Creole is different from British English it is in no way deficient as a language She emphasizes the importance of familiarity with the structure of Creole since it is only in this way that the teachers can discriminate between real mistakes and Creole interference Attention is drawn to the relationship between language attitudes and social stereotypes and the danger that these might be translated into reality Different strategies available to the teacher are examined drawing on American experience in this field and various initiatives taken by British teachers are described thus making the study a work of practical value to teachers and others
