materials scientists *Transactions of the International Astronomical Union: Reports on Astronomy* C. de Jager, 2012-12-06
This volume contains the fifteenth tri annual reports of the Presidents of the forty Commissions of the International Astronomical Union it refers to the progress in our discipline during the three years 1970 1971 and 1972 As compared to earlier volumes a gradual change in character is unmistakable The ever increasing flow of publications combined with the obvious necessity to keep the Reports at a reasonable size and price level has gradually forced the Commission Presidents to be more selective than before in drafting their Reports I have certainly stimulated them into that direction in order that Reports like these be valuable and lasting it seems imperative that the individual contributions have the character of a critical overall review where a fairly complete summary is given of the major developments and discoveries of the past three years and in which the broad developments and new trends be clearly outlined while at the same time essential problems for future research are identified With respect to the latter item I have suggested the Commission Presidents to add to their reports a brief section on scientific priorities for future research in the field of their Commissions In order to save space I have suggested to Commission Presidents that references to published papers are given on the basis of their number in the published issues of Astronomy and Astrophysics Abstracts For instance the indication 06 078 019 or AAA 06 078

Diatomic Interaction Potential Theory Jerry Goodisman, 2012-12-02 Diatomic Interaction Potential Theory Volume 1
Fundamentals deals with the theoretical approaches to calculations for diatomic systems in their ground states More specifically this book considers the problem of calculating the wave function and energy for the lowest state of a system of N electrons moving in the field of two fixed point charges the nuclei of a diatomic system separated by a distance R Comprised of three chapters this volume opens with an introduction to the nature of an interatomic interaction potential or potential energy curve The separation of nuclear from electronic motions is considered along with the methods used to measure potential energy curves The next chapter presents a qualitative discussion of potential energy curves with emphasis on the effects to be expected when two atomic systems are allowed to interact at large separation The final chapter looks at the main approaches to schemes of calculation variation theory perturbation theory the virial and Hellmann Feynman theorems local energy principles and quantum statistical theories This monograph will be a useful resource for students and teachers of physical chemistry **The Chemisorptive Bond** Alfred Clark, 2012-12-02 The Chemisorptive Bond Basic Concepts describes the basic concepts of the chemisorptive bond on solid surfaces from the simple analogies with ordinary chemical bonds to the quantum mechanical approaches This book is composed of 10 chapters and begins with discussions of simple formulas for correlating measurable quantities in chemisorptions and catalysis The succeeding chapters deal with theories based on quantum mechanical principles that describe the mutual interactions of atoms of the solid and foreign atoms on the surface The remaining chapters consider the possible arrangements of ligands about a central metal atom including octahedral tetrahedral cubic and square planar and how these arrangements affect chemisorption This book will be of great

value to chemical engineers and researchers

Photochemistry of Air Pollution Philip Leighton, 2012-12-02

Photochemistry of Air Pollution provides information pertinent to air pollution and atmospheric chemistry. This book discusses the photochemical reactions produced by sunlight that may convert relatively harmless pollutants into substances that constitute a nuisance, create possible health hazards, and cause economic problems for humans. Organized into 10 chapters, this book starts with an overview of the problem of air pollution, particularly photochemical smog. This text then discusses the factors that collectively determine the amount and spectral distribution of the radiation entering a surface layer of the atmosphere. Other chapters compare the specific absorption rates of several absorbers that are present in the air during periods of photochemical smog, including oxygen, ozone, nitrogen dioxide, sulfur dioxide, ketones, peroxides, and particulate matter. The final chapter deals with the process of formation of the substances responsible for the physiological effects of eye irritation and plant damage. This book is a valuable resource for photochemists and air pollution scientists.

Quantum Chemistry John Lowe, 2012-12-02 Quantum Chemistry covers the basic principles, methods, and results of quantum chemistry, providing insights on electron behavior. This book is organized into 14 chapters that focus on ground state molecular orbital theory. After briefly dealing with some of the concepts of classical physics, the book goes on to describe some simple but important particle systems. It then examines several systems with discontinuous potential energies, such as the simple harmonic oscillator and the hydrogen-like ion system. A chapter presents a set of postulates and theorems that form the formal foundation of quantum mechanics. Considerable chapters are devoted to various quantum chemical methods, as well as their basic features and application to molecular orbital evaluation. These methods include Hückel molecular orbital, variation, linear variation, extended Hückel, and SCF LCAO-MO. The concluding chapters deal with the development of theories for molecular orbital, including time-independent Rayleigh-Schrödinger perturbation theory, group, and qualitative molecular orbital theories. Supplemental texts of the more complicated derivations or proofs and problems encountered in quantum chemistry are also provided. This book is an introductory text intended for organic, inorganic, and physical chemists, as well as for graduate and undergraduate students.

The Radiation Chemistry of Water Ivan Draganić, 2012-12-02 The Radiation Chemistry of Water tackles radiation-induced changes in water and explains the behavior of irradiated water with some changes in aqueous solutions. This book deals primarily with short-lived species like the hydroxyl radical, hydrated electron, and hydrogen atom, which cause the chemical changes in irradiated water and aqueous solutions. These species and their origin, properties, and dependence of their yields on various factors are discussed in several chapters. Other topics also covered are the diffusion-kinetic model of water radiolysis and some general cases, radiation sources, and dosimetry. This book is most useful to students in the fields of radiation chemistry, physical chemistry, radiobiology, and nuclear technology.
