QUESTION 1

1.1   Solve for x:

      1.1.1 $x^2 - 9 = 0$ (2)

      1.1.2 $x - 5 + \dfrac{2}{x} = 0$ (correct to TWO decimal places)

                                                                                        (4)

      1.1.3 $x = 1 + \sqrt{7 - x}$ (5)

      1.1.4 $x^2 + 2x - 15 \geq 0$ (3)

1.2   Solve simultaneously for x and y in:

$$y + 2x = 3$$
$$y^2 - y = 3x^2 - 5x$$

                                                                                         (6)

1.3   Simplify completely, WITHOUT the use of a calculator: $\sqrt[n]{\dfrac{10^n + 2^{n+2}}{5^{2n} + 4(5^n)}}$

                                                                                          (4)

                                                                                                  [24]

Canadian Mathematical Bulletin ,1971-03   *Quantum Computation And Quantum Information Theory, Collected Papers And Notes* Chiara Macchiavello,G Massimo Palma,Anton Zeilinger,2001-01-17 Quantum information theory has revolutionised our view on the true nature of information and has led to such intriguing topics as teleportation and quantum computation The field by its very nature strongly interdisciplinary with deep roots in the foundations both of quantum mechanics and of information theory and computer science has become a major subject for scientists working in fields as diverse as quantum optics superconductivity or information theory all the way to computer engineers The aim of this book is to provide guidance and introduce the broad literature in all the various aspects of quantum information theory The topics covered range from the fundamental aspects of the theory like quantum algorithms and quantum complexity to the technological aspects of the design of quantum information processing devices Each section of the book consists of a selection of key papers with particular attention to their tutorial value chosen and introduced by leading scientists in the specific area An entirely new introduction to quantum complexity has been specially written for the book   Canadian Mathematical Bulletin ,1974-06   **Extrinsic Geometric Flows** Bennett Chow,Christine Guenther,Mat Langford,2020-05-14 Extrinsic geometric flows are characterized by a submanifold evolving in an ambient space with velocity determined by its extrinsic curvature The goal of this book is to give an extensive introduction to a few of the most prominent extrinsic flows namely the curve shortening flow the mean curvature flow the Gau curvature flow the inverse mean curvature flow and fully nonlinear flows of mean curvature and inverse mean curvature type The authors highlight techniques and behaviors that frequently arise in the study of these and other flows To illustrate the broad applicability of the techniques developed they also consider general classes of fully nonlinear curvature flows The book is written at the level of a graduate student who has

had a basic course in differential geometry and has some familiarity with partial differential equations It is intended also to be useful as a reference for specialists In general the authors provide detailed proofs although for some more specialized results they may only present the main ideas in such cases they provide references for complete proofs A brief survey of additional topics with extensive references can be found in the notes and commentary at the end of each chapter
