Tyler,Clare Howarth,Lora T. Likova,2016-09-06 The ultimate goal of functional brain imaging is to provide optimal estimates of the neural signals flowing through the long range and local pathways mediating all behavioral performance and conscious experience In functional MRI Magnetic Resonance Imaging despite its impressive spatial resolution this goal has been somewhat undermined by the fact that the fMRI response is essentially a blood oxygenation level dependent BOLD signal that only indirectly reflects the nearby neural activity The vast majority of fMRI studies restrict themselves to describing the details of these BOLD signals and deriving non quantitative inferences about their implications for the underlying neural activity This Frontiers Research Topic welcomed empirical and theoretical contributions that focus on the explicit relationship of non invasive brain imaging signals

to the causative neural activity The articles presented within this resulting eBook aim to both highlight the importance and improve the non invasive estimation of neural signals in the human brain To achieve this aim the following issues are targeted 1 The spatial limitations of source localization when using MEG EEG 2 The coupling of the BOLD signal to neural activity Articles discuss how animal studies are fundamental in increasing our understanding of BOLD fMRI signals analyze how non neuronal cell types may contribute to the modulation of cerebral blood flow and use modeling to improve our understanding of how local field potentials are linked to the BOLD signal 3 The contribution of excitatory and inhibitory neuronal activity to the BOLD signal 4 Assessment of neural connectivity through the use of resting state data computational modeling and functional Diffusion Tensor Imaging fDTI approaches **CERN.** ,2009 *Web Engineering* Sven Casteleyn,Gustavo Rossi,Marco Winckler,2014-09-16 This book constitutes the refereed proceedings of the 14th International Conference on Web Engineering ICWE 2014 held in Toulouse France in July 2014 The 20 full research papers 13 late breaking result papers 15 poster papers and 4 contributions to the PhD symposium presented were carefully reviewed and selected from 100 submissions Moreover 3 tutorials and 3 workshops are presented The papers focus on six research tracks namely cross media and mobile Web applications HCI and the Web Modelling and Engineering Web applications quality aspects of Web applications social Web applications Web applications composition and mashups **Proceedings of the International Conference on Sustainable Green Tourism Applied Science - Engineering Applied Science 2024 (ICoSTAS-EAS 2024)** Anak Agung Ngurah Gde Sapteka,I Gusti Lanang Made Parwita,I Komang Wiratama,Fransiska Moi,Komang Widhi Widantha,Elvira Septevany,Dewa Ayu Indah Cahya Dewi,Wayan Eny Mariani,Rifqi Nur Fakhrurozi,2024-11-29 This is an open access book The ICoSTAS conference is multidisciplinary topic area covering engineering and applied social science Depend on the paper topic and quality with high confidence this proceeding can reach aim and topic of the conference As an international platform for scholars researchers practitioners and government to discuss interdisciplinary research and practices that focuses in Green Tourism with Sustainable Development Based The collaboration between engineering and applied social science field research will contribute an important development for sustainable tourism in people welfare With proceeding publication OJS based and internationally indexing the paper will can disseminate widely and become one of the eligible references for the next research and development in sustainable tourism

Interpretability in Deep Learning Ayush Somani,Alexander Horsch,Dilip K. Prasad,2023-04-30 This book is a comprehensive curation exposition and illustrative discussion of recent research tools for interpretability of deep learning models with a focus on neural network architectures In addition it includes several case studies from application oriented articles in the fields of computer vision optics and machine learning related topic The book can be used as a monograph on interpretability in deep learning covering the most recent topics as well as a textbook for graduate students Scientists with research development and application responsibilities benefit from its systematic exposition **Innovative Conservation**
