Abiotic Stress Responses in Plants Parvaiz Ahmad, M.N.V. Prasad, 2011-11-16 Abiotic stress cause changes in soil plant atmosphere continuum and is responsible for reduced yield in several major crops Therefore the subject of abiotic stress response in plants metabolism productivity and sustainability is gaining considerable significance in the contemporary world Abiotic stress is an integral part of climate change a complex phenomenon with a wide range of unpredictable impacts on the environment Prolonged exposure to these abiotic stresses results in altered metabolism and damage to biomolecules Plants evolve defense mechanisms to tolerate these stresses by upregulation of osmolytes osmoprotectants and enzymatic and non enzymatic antioxidants etc This volume deals with abiotic stress induced morphological and anatomical changes aberrations in metabolism strategies and approaches to increase salt tolerance managing the drought stress sustainable fruit production and postharvest stress treatments role of glutathione reductase flavonoids as antioxidants in plants the role of salicylic acid

Plant-pathogen Interactions Nicholas J. Talbot, 2004 Plant diseases are destructive and threaten virtually any crop grown on a commercial scale They are kept in check by plant breeding strategies that have introgressed disease resistance genes into many important crops and by the deployment of costly control measures such as antibiotics and fungicides However the capacity for the agents of plant disease viruses bacteria fungi and oomycetes to adapt to new conditions overcoming disease resistance and becoming resistant to pesticides is very great For these reasons understanding the biology of plant diseases is essential for the development of durable control strategies Plant Pathogen Interactions provides and overview of our current knowledge of plant pathogen interactions and the establishment of plant disease drawing together fundamental new information on plant infection mechanisms and host responses The role of molecular signals gene regulation and the physiology of pathogenic organisms are emphasized but the role of the prevailing environment in the conditioning of disease is also discussed Emphasizing the broader understanding that has emerged from the use of molecular genetics and genomics Plant Pathogen Interactions highlights those interactions that have been most widely studied and those in which genome information has provided a new level of understanding

Induced plant responses to microbes and insects Corné M. J. Pieterse, Marcel Dicke, Saskia C. M. Van Wees, Erik H. Poelman, 2014-04-14 Plants are members of complex communities and interact both with antagonists and beneficial organisms An important question in plant defense signaling research is how plants integrate signals induced by pathogens insect herbivores and beneficial microbes into the most appropriate adaptive response Molecular and genomic tools are now being used to uncover the complexity of the induced defense signaling networks that have evolved during the arms races between plants and the other organisms with which they intimately interact To understand the functioning of the complex defense signaling network in nature molecular biologists and ecologists have joined forces to place molecular mechanisms of induced plant defenses in an ecological perspective In this Research Topic we aim to provide an on line open access snapshot of the current state of the art of the field of induced plant responses to microbes and insects with a special focus on the translation of molecular mechanisms to ecology and vice versa
