Planting A Seed Sequencing:

Cellular and Molecular Biology of Plant Seed Development Brian A. Larkins, Indra K. Vasil, 2013-03-09 The beginnings of human civilization can be traced back to the time nearly 12 000 years ago when the early humans gradually changed from a life of hunting and gathering food to producing food This beginning of primitive agriculture ensured a dependable supply of food and fostered the living together of people in groups and the development of society During this time plants seeds were recognized as a valuable source of food and nutrition and began to be used for growing plants for food Ever since plant seeds have played an important role in the development of the human civilization Even today seeds of a few crop species such as the cereals and legumes are the primary source of most human food and the predominant commodity in international agriculture Owing to their great importance as food for humans and in international trade seeds have been a favorite object of study by developmental biologists and physiologists nutritionists and chemists A wealth of useful information is available on the biology of seeds

Crop Improvement in the Era of Next-Generation Sequencing Manohar Chakrabarti, Umesh K. Reddy, Nabanita Chattopadhyay, 2025-02-27 To feed the burgeoning world population global food production must increase drastically This is becoming more challenging with the imminent threats of global climate change especially the incidences of abiotic stresses such as drought heat and salinity are predicted to increase soon Global climate change may also affect plant biotic interactions Additionally modernization in underdeveloped and developing countries is expected to decrease available land for agricultural usage Thus to achieve sustainable agricultural development it is imperative to produce more food without using additional land and other valuable resources including water These necessitates should develop novel rapid and robust crop improvement methods that complement traditional plant breeding approaches Crop improvement strategies to tackle future challenges necessitate the elucidation of underlying genes and

gene regulatory networks The dwindling cost of next generation sequencing and the emergence of novel sequencing approaches such as long read sequencing technology e g PacBio Oxford Nanopore and others are transforming agricultural research at an unprecedented rate is opening a plethora of opportunities in turbocharging crop improvement initiatives Recent advances in next generation sequencing will continue to play a pivotal role in future crop improvement efforts However the progress of genomic technologies has not been uniformed world wide Thus it is now relevant to compile a collection of recent advancements in the field of structural functional and comparative genomics and its relevance to crop improvement so that it is disseminated to a broader audience

Phylogenomic Discordance in Plant Systematics Stefan Wanke,Susann Wicke,2023-11-15 Phylogenetics often uncovers contradicting hypotheses regarding the relationships within the same group of organisms a phenomenon known since the beginning of the molecular systematics era While historically single marker based analyses produced discordance nowadays entire cellular genomes or portions of the same genomic compartment conflict with others or the rest respectively In contrast to the beginning of the molecular systematics era when adding markers and taxa offered a way out of systematic errors genome inference based incongruences cannot be addressed and explained easily Disagreeing phylogenomic hypotheses might originate from various evolutionary processes including but not limited to hybridization or incomplete lineage sorting thereby leading to gene tree versus species tree associated discrepancies Today this can be expanded to genome discordance where phylogenomic signals of organellar genomes plastid mitochondrial and the nuclear genome disagree due to intrinsically different coalescent paths or phenomena like organelle capture **Abiotic Stresses in**
