Latva, Heta Lähdesmäki, Kirsi Sonck-Rautio, Harri Uusitalo, 2024-09-23 This book explores the human relationship to changing biodiversity by bringing together multidisciplinary insights into human nature relations from the humanities New animal and plant species arrive and previously existing ones may disappear However the historical and social perspectives of the changes have been understudied so far This book approaches the human relationship with changing biodiversity from three different angles belonging and non belonging emotions and environmental policy The question of belonging and non belonging is crucial when it comes to changing biodiversity The authors ask who decides where species can move and live and when invasive becomes native Similarly emotions have a big role in human nature relations The book shows why we grieve the loss of some species and hate some other species and how our emotions change over time The writers also aim to

show how environmental policies or the practice of governing species are affected by societal discussion emotions scientific research and topical concepts as well as how these policies shape biodiversity and our perceptions of different species The authors provide fresh insights into human nature relations and explain why we need multidisciplinary approaches in order to fully understand their complexity

T.J. Pandian, 2022-08-01 Plants are autotrophs and sessile while animals are heterotrophs and motile. Sessility has imposed on plants 94% hermaphroditism, 23% selfing, 3% polyploidization and 39% clonality in comparison to 19 and Sustainable Utilization and Conservation of Plant Genetic Diversity Jameel M Al-Khayri, Shri Mohan Jain, Suprasanna Penna, 2024-03-28 This book collates a wide spectrum of topics relevant to contemporary research achievement in sustainable utilization of plant genetic resources and conservation of plant genetic diversity within the framework of different crop systems. It introduces the status of crop genetic diversity and provides prospects for conservation of crop genetic diversity for sustainable agriculture. Plant genetic diversity is crucial for food security and agro ecosystem maintenance, paving ways to achieve sustainable agriculture development. This necessitates consciously and judiciously the conservation of all existing plant genetic resources for sustainable use in a variety of applications for human welfare. The wild and traditional landraces have generated an increased interest as a repertoire of valuable traits for breeding and improvement of cultivated germplasm. Internationally concerted actions and policies toward the conservation and management of plant genetic diversity are mounting from the organization levels to national policies as deemed appropriate for the sustainable development goals. This needs an understanding of genetic diversity of different crops, ecological drivers and the structural changes within genetic diversity due to climate change. It is also equally important to evolve knowledge on what, how and where to conserve the existing plant genetic resources for present and future use. Assessment of the genetic diversity presents in a wild and traditional agro ecosystem is another step towards effective utilization. In the past few years, advanced breeding tools have been developed which have offered great promise for efficient modification of targeted traits. This book consolidates current knowledge in the above core areas of plant genetic diversity and conservation. It is an essential reference for professionals, researchers, policy makers and commercial entrepreneurs concerned with plant genetic diversity and breeding to achieve enhanced agricultural productivity and sustainability of food resources to ensure food security. The book is also invaluable for graduate students involved in agriculture research. **Human-Plant Entanglement: Thinking with Plants in the Anthropocene**, 2025-06-12 Human Plant Entanglement: Thinking with Plants in the Anthropocene is an edited collection that redefines the boundaries of phytocentric scholarship. By foregrounding the question of the Anthropocene at the centre of plant studies, this book illustrates how attentiveness to plant life can allow our habitual anthropocentric instrumental assumptions to be invaded by a unique phytocentric impression that presents a new ethical imaginary for a human-plant relationship. With twelve carefully argued essays, this book sets a new benchmark in the field of Critical Plant Studies. **Engineering Plant-Based Food Systems** Sangeeta Prakash, Bhesh Bhandari, Claire Gaiani, 2022-11-16 Engineering Plant Based Food Systems provides a comprehensive in-depth understanding on the technologies used to create quality plant-based foods.
