*Actual Energy Consumption in Dwellings* Olivia Guerra Santin, 2010 Residential buildings have continuously improved in energy efficiency partly as a consequence of the introduction of energy regulations in many countries Although better thermal properties and systems efficiency have lowered energy consumption for space heating in recent decades substantial differences in energy consumption in similar dwellings are still being observed These differences in consumption are thought to be caused by differences in occupancy patterns by quality of construction and by rebound effects This research addresses the effect of energy performance regulations and occupant behaviour on energy consumption for space and water heating in dwellings built after the introduction of the energy performance regulations in the Netherlands The results of this research show that improving the energy efficiency of buildings alone is not enough to decrease that energy consumption

**California Oil World** ,1980      **Geothermal Energy** ,1980      *Impact of Occupants' Behaviour on Zero-Energy Buildings* Francesca Stazi, Federica Naspi, 2017-11-27 This book highlights the importance of

human behaviour in the building design process with a focus on the construction of zero energy buildings It reports on and discusses the strategies the authors have adopted to develop behavioural models and explains how to integrate them into building design The analyses and findings presented in the book are supported by novel experimental data derived from building monitoring projects carried out by the authors research group Further the book suggests key methodologies and modelling approaches The authors subsequently address occupants behaviour in zero energy buildings from an energy perspective They investigate many different aspects of the interactions between users and buildings devices from assessing the triggering factors of occupants behaviours to discussing modelling and simulation approaches Methods for acquiring and analysing experimental data are presented as well as a discussion on objective and subjective factors that trigger occupants behaviour Other content includes experimental investigations from real case studies to assess occupants interaction with building devices an assessment of the driving factors that trigger human actions to identify the key parameters in the behavioural models and critical suggestions on monitoring and modelling approaches to optimise data acquisition and modelling methods The guidelines presented here will allow designers and researchers to improve the accuracy of their simulations of buildings energy performance and support both building design and management processes It will be of particular use to researchers involved in the development of behavioural models as it presents experimental data and a comprehensive overview of behavioural modelling The book will also be of interest to students who are studying the behavioural component of integrated building design
