

# Not-in-Traffic Surveillance: Fatality and Injury Statistics in Nontraffic Crashes, 2008 to 2011

## Summary

Based on the Not-in-Traffic Surveillance (NITS) system, on an average, 1,621 people were killed each year in nontraffic motor vehicle crashes during the four year period, 2008 to 2011. About 39 percent of these people were nonoccupants such as pedestrians and bicyclists. Additionally, on an average, 91,000 people were injured in these crashes each year, of which 35 percent were nonoccupants.

## Introduction

The nontraffic motor vehicle crashes are a class of crashes that occur off the public traffic ways. These crashes, subsequently referred to as “nontraffic crashes,” are mostly single-vehicle crashes on private roads, two-vehicle crashes in parking facilities, or collisions with pedestrians on driveways. Then there are also noncrash incidents such as a vehicle falling on a person underneath or unintentional carbon monoxide poisoning. Both nontraffic crashes and noncrash incidents have the potential to kill or injure people. Nevertheless, the information on neither of these was available until 2007, when Congress required National Highway Traffic Safety Administration (NHTSA) to start collecting and maintaining information pertinent to these events. Complying with the directive, the NHTSA designed and implemented a virtual data collection system, NITS that would provide counts

and details of the fatalities and injuries to people involved in nontraffic crashes and noncrash incidents. This Crash•Stats focuses only on nontraffic crashes and presents some salient statistics about occupants and nonoccupants killed and injured in such crashes during 2008–2011.

The statistics reported in this statistical summary are based on the NITS data 2008–2011. Since a complete record of all nontraffic crash fatalities from States and police jurisdictions is not available, adjusted weights have been used to obtain national estimates. The background and details about collection of the NITS data and the adjustment of weights adopted from the General Estimates System (GES) are provided in the appendix.

## People Killed in Nontraffic Crashes During 2008 to 2011

The NITS data show that during the four year period 2008–2011, an estimated total of 6,483 people were killed in nontraffic crashes (Table 1). This amounts to an average of 1,621 people killed each year in such crashes. Nonoccupants accounted for 39 percent of these people—41 percent of whom were struck by forward-moving vehicles and 37 percent had been hit by backing vehicles. Rollaway vehicles (unattended with no driver in control) killed a total of 370
