**Highway Engineering** Martin Rogers, Bernard Enright, 2023-07-12 HIGHWAY ENGINEERING Understand a foundational area of civil engineering with this up to date textbook Highway construction is a complex discipline within civil engineering with the potential to transform national economies and transportation infrastructures With car infrastructure coming under both increasing demand and increasing scrutiny for its environmental impact the challenges and complexities of highway engineering have never been a more vital subject The future of sustainable transportation depends on an engineering profession with a solid grasp of the fundamentals of highway design and construction Highway

Engineering provides a comprehensive overview of these fundamentals preparing civil engineers and engineering students to analyze design and build highways. Situating its subject in the context of a broader political economy, social and ecological reality and more, it proceeds in a logical sequence from planning to design to construction to maintenance. The result is a fully up to date introduction to this subject at the heart of transport engineering. Readers of the fourth edition of Highway Engineering will also find strong integration of material from the UK Design Manual for Roads and Bridges incorporating recent significant changes in the design of highway pavements. Detailed examples and case studies to cultivate deepened understanding. Increased attention to the growing importance of non car based modes of highway transportation walking cycling and public transport. Highway Engineering is essential for engineering students studying civil engineering or transport engineering as well as for professional civil engineers looking for a reference work.

**Advanced Solutions and Practical Applications in Road Traffic Engineering** Elżbieta Macioszek, Anna Granà, Grzegorz Sierpiński, 2023-01-01 This book presents many valuable tips for making decisions related to traffic flow in transport networks. The knowledge base in practical examples as well as the decision support systems described in this book finds interest among people who face the daily challenge of searching for advanced solutions and practical applications in road traffic engineering. The publication is therefore addressed to local authorities related to the planning and development of development strategies for selected areas with regard to transport both in the urban and regional dimension and to representatives of business and industry as people directly involved in the implementation of traffic engineering solutions. The publication contains selected papers submitted to and presented at the 18th Transport Systems Theory and Practice Scientific and Technical Conference organized by the Department of Transport Systems, Traffic Engineering and Logistics at the Faculty of Transport and Aviation Engineering at the Silesian University of Technology.
