WARNING

- ELECTRICAL SHOCK HAZARD.** Disconnect electrical power to the furnace before starting installation. Failure to do so could result in serious injury from electrical shock.
- SHARP EDGES HAZARD.** Sharp edges may cause serious injury from cuts. Use care when making plenum openings and handling ductwork. Use personal protective equipment when installing HVAC equipment.
- RISK OF SCALDING.** Water temperature over 120°F can cause severe burns and scald instantly. Shut off the hot water supply before disconnecting or tapping into any hot water supply line.

CAUTION

RISK OF PROPERTY AND EQUIPMENT DAMAGE.

- Do not install humidifier in attic or crawl areas.
- Do not install humidifier where heating temperatures could occur. The water line could freeze and crack causing water damage to the home.
- Do not install humidifier or bypass connection on the furnace cabinet.
- Do not install humidifier or bypass connection on a plenum face where the blunted off ends of the cooling coil will restrict air movement through the humidifier.
- Do not set humidity level above recommended or to recommended level if condensation exists on inside windows of any unheated space, as condensation damage may result. Excess humidity can cause moisture accumulation which can allow the possibility for mold growth in your home.
- Do not connect humidifier transformer to blower motor wiring. Premature component failure may result.
- When installing Manual Humidifier Control on downflow furnace, ensure blower continues to run after a heat call is satisfied to eliminate high temperatures from damaging the Control.
- Do not install humidifier where water pressure exceeds 125 psi, since damage to the humidifier may result. Follow codes in effect concerning pressure reduction.
- Do not install humidifier on the supply plenum where static pressure exceeds 0.2" W.C.
