Artificial intelligence in predicting, determining and controlling cell phenotype or tissue function in inflammatory diseases Melanie L. Hart, Bernd Rolaufts ,Ryuji Kato, 2024-05-10 The last decade has seen rapid development in the use of computational techniques at bulk tissue and single cell level However our knowledge remains limited in this regard and further progress is needed especially in inflammatory and degenerative diseases Controlling modeling or predicting cellular phenotype in this context using artificial intelligence AI will greatly improve the available in vitro in situ in vivo and in silico methods but also aid in the understanding of disease pathology and therapeutic efficiency These methods not only have ramifications for our pathophysiological understanding of tissue function but are also important for advancing AI methods in cell culture tissue explants or in vivo for immunologically relevant characteristics of single cells cell populations and tissues to predict cell or tissue function
