The Oxford Handbook of Private Equity Douglas Cumming,2012-03-15 The term private equity typically includes investments in venture capital or growth investment as well as late stage mezzanine turnaround distressed and buyout investments It typically refers to the asset class of equity securities in companies that are

not publicly traded on a stock exchange. However, private equity funds do in fact make investments in publicly held companies, and some private equity funds are even publicly listed. Chapters in this book cover both private and public company investments as well as private and publicly listed private equity funds. This Handbook provides a comprehensive picture of the issues surrounding the structure, governance, and performance of private equity. It comprises contributions from 41 authors based in 14 different countries. The book is organized into seven parts, the first of which covers the topics pertaining to the structure of private equity funds. Part II deals with the performance and governance of leveraged buyouts. Part III analyzes club deals in private equity, otherwise referred to as syndicated investments with multiple investors per investee. Part IV provides analyses of the real effects of private equity. Part V considers the financial effects of private equity. Part VI provides analyses of listed private equity. Finally, Part VII provides international perspectives on private equity.

Venture Capital Stefano Caselli, Stefano Gatti, 2012-11-02. Josh Lerner, Jacob H. Schiff, Professor of Investment Banking, Harvard Business School, and National Bureau of Economic Research. During much of the 1970s and 1980s, venture capital and private equity remained largely a United States phenomenon. Over the past decade, however, private equity has spread around the globe, taking particularly firm root in Western Europe, indeed growing 4,700% since 1984 through 2001. Today, Europe is the dominant private equity market outside the United States. Despite this tremendous growth and the current recessionary climate, there is ample room for attractive expansion in European private equity, both for venture capital and private equity. There have been several reasons for this growth. The first has been the internationalization of capital sources. The key sources of capital for European private equity funds have traditionally been segmented by national boundaries; historically, the pattern in Europe has been for private equity groups to raise funds from

banks insurance companies and government bodies in their own country with little involvement from foreign investors These barriers are now breaking down for two principal reasons First institutional investors particularly in the United States have become increasingly interested in European funds Second many international private equity firms have become more active in Europe A second driver of growth has been the entry of new talent into the industry Traditionally many European private equity investors had come from financial or consulting backgrounds rather than from operating roles

Department for Business, Innovation and Skills Great Britain: Parliament: House of Commons: Committee of Public Accounts,2010-03-09 Since 2000 the Department for Business Innovation and Skills the Department and its predecessors have invested public money alongside private investors in a series of funds managed by private sector fund managers The funds provide support to small businesses unlikely to receive support from other sources The programme currently comprises 28 funds By December 2009 taxpayers had contributed 338 million alongside 438 million from private investors The Department's intervention in the venture capital market was experimental and risky yet it did not set clear prioritised objectives for the funds including the expected economic benefits and did not set targets at the outset for expected rates of return The Department did not begin to properly evaluate the progress of its early funds until late 2008 and to the concern of the Committee did not publish any information on the funds until December 2009 The evidence suggests that the funds are underperforming As at December 2008 the Regional Venture Capital Funds the largest category of early funds showed negative returns and the average rate of return was minus 15.7 per cent whilst private European venture capital funds of a similar size had an average rate of return of minus 0.4 per cent The Department has not done enough to curtail the high costs of managing the funds Fees for the Regional Venture Capital Funds have totalled 46 million compared to the 130 million invested Substantial fees have been paid to fund managers even though the performance of the funds has been poor

chances of landing one of these limited opportunities *Public Policy for Venture Capital* Arnd Plagge, 2007-09-24 In view of Germany's lackluster economic performance during the 1990s i.e. at a time when the American economy was booming a relative lack of venture capital vis à vis the United States was lamented in Germany German government programs meant to help raise venture capital in order to finance predominantly young technologically innovative unlisted small and medium sized enterprises which despite low current profitability are considered to have a sufficiently large growth potential Deutsche Bundesbank were to a large extent unsuccessful since their inception in the 1960s It is well known that Germans tend to be more risk averse than Americans and it is therefore no wonder that the author of this book Arnd Plagge finds that Germany's venture capital market is relatively underdeveloped when compared to its counterpart in the United States There can be no doubt that due to its investment focus on innovative start up companies venture capital can play an important role in fostering economic growth and the creation of modern high skill jobs especially by spurring the development of entirely new industries and products from such diverse and dynamic realms as pharmaceuticals biotechnology as well as information and communication technology
