The Venus Fly Trap

Most plants make their own food. This is called photosynthesis. But the Venus Fly Trap eats meat! Bugs, to be exact. It's a carnivore. It eats animals like spiders, flies, caterpillars, and crickets. The Venus Fly Trap grows in North Carolina and South Carolina in swampy bogs. This is why it needs to eat insects and arachnids. The soil where Venus Fly Traps grow doesn't have everything plants need to make their own food. So, they have to eat things like slugs and dragonflies to have what they need to grow.

You can have your own Venus Fly Trap. Just make sure to feed it every day!
