Crustacean Reproductive Physiology and its Applications Haihui Ye, Chaoshu Zeng, Naoaki Tsutsui, Heinrich Dirksen, 2022-09-27 Demand for crustacean production is increasing significantly throughout the world and crustacean production from capture fisheries has almost stagnated. Aquaculture is the only possibility to meet this ever growing demand for crustaceans. Still many commercially important crustaceans are being captured from the wild while breeding and seed production technologies are not available for these species. The bottleneck in the successful breeding of crustacean species is mainly due to the non availability of information about reproductive biology. Studies on crustacean reproduction will shed new light on understanding the mechanism of sex determination and differentiation. Meanwhile the application of innovative techniques will vitally contribute to the progress of the crustacean industry. The research findings on crustacean reproduction will directly benefit aquaculture for successful captive breeding and seed production. Here we are gathering both original research and review papers with the scope of the research topic including but not limited to Mechanism of sex determination, sexual differentiation and gonadal development in crustaceans. Other life functions e.g. endocrine, nutrition, immunity, heredity involved in reproduction in crustaceans. Applications of modern endocrinological and molecular approaches contributed to crustacean reproduction. Cardiovascular Fibrosis and Related Diseases: Basic and Clinical Research Advances Yihua Bei, Jiu-Chang Zhong, Hong S. Lu, 2022-04-19 **The Wildlife Gut Microbiome and Its Implication for Conservation Biology** Lifeng Zhu, Simon Bahrndorff, Jianjun Wang, 2021-08-19 **Opportunistic pathogens: pathogenesis and multi-drug resistance mechanisms** Shicheng Chen, Lisheng Liao, Mingxi Wang, 2025-04-17 The World Health Organization (WHO) has identified antimicrobial resistance (AMR) as one of the most critical global public health threats. At least 4.95 million people death was caused by AMR in 2019. Even worse its potential economic impact is estimated to reach a staggering 100 trillion due to AMR in the next thirty years. <https://www.who.int/health-topics/antimicrobial-resistance> Researching the development of antibiotic resistance and exploring ways to prevent, detect and treat antimicrobial resistant infections have been prioritized in the medical microbiology field. AMR mechanisms have been uncovered on many Enterobacteriaceae and Gram positive bacteria such as *Enterococcus faecium* and *Staphylococcus aureus* due to their clinical significance and diverse resistance mechanisms. Unfortunately the opportunistic pathogens have been overlooked in the clinics because they are often identified as normal flora or common environmental organisms in

human specimens Opportunistic pathogens may have low pathogenicity while they can often cause serious infections in immunocompromised patients and lead to outbreak in the healthcare settings They may even lead to diseases in healthy individuals if being introduced into hosts system by traumatization Management of such infections is often challenging due to the lack of guidelines standards for antibiotic susceptibility tests as well as multi drug resistance MDR Lately diseases linked to non pathogenic microorganisms are becoming more common under typical conditions such as *Stenotrophomonas maltophilia* *Elizabethkingia* spp *Acinetobacter baumannii* and many others

Therapeutic potential of natural products in oxidative and metabolic diseases Ochuko Lucky Erukainure, Aliyu Muhammad, Erukainure, Aliyu Muhammad, Chika Ifeanyi Chukwuma, Md Shahidul Islam, Olakunle Sanni, Veronica Folakemi Salau, 2024-04-26 Oxidative and metabolic diseases represent a large proportion of global challenges to health and quality of life These diseases are often characterised by the imbalance between the cellular prooxidant products of metabolic processes and the antioxidant molecules within the cells The imbalance often led to the underlying factors that exacerbate the pathogenesis of some life threatening diseases such as carcinogenesis obesity diabetes and cardiovascular diseases Natural products including phytochemicals and functional foods are known for their ability to affect metabolic processes such as ameliorating reactive oxygen species induced mitochondria dysfunction mitigating inflammatory response and other cellular functions that could ameliorate the disease developments Despite the relatively low toxicities of natural products as compared with synthetic products further studies are still required to optimize the bioavailability therapeutics pharmaceuticals and clinical trials of natural products in patients suffering oxidative and metabolic diseases

Intrauterine Health and Programming Jonathan R Seckl,Yves Christen,2014-05-27 The authors address in particular the role of hormones and their links with other maternal environmental mediators in developmental programming The crucial nature of the placenta as an interface and target between maternal and foetal environments is addressed Emphasis is made on the emerging science of epigenetics as a potential explanation for how environmental events that occur during brief windows of development may exert effects that impact upon somatic cells through many rounds of mitosis for much of the life span of the subsequent organism Rising Stars in Clinical Microbiology : 2022 Fangfeng Yuan,Zhanbo Zhu,Dania

AlQasrawi,Rafael Franco,2022-12-06 **Recent Advances in Understanding The Genetics of Immunological Disorders** Che Kang Lim,Jinqiao Sun,Hassan Abolhassani,2024-12-13 Immunological disorders are diseases or conditions due to the dysfunction of the immune system They include primary immunodeficiency syndromes autoimmune diseases asthma allergy and autoinflammatory syndromes These disorders disrupt our body s ability to defend against pathogens In addition it may lead to exaggerated chronic inflammatory responses and tissue damage Immunological disorders are clinically and genetically heterogeneous The phenotypic spectrum of the diseases is broad in some of the disorders On the other hand the clinical phenotype derived from distinct genotypes can overlap and the same phenotype can be cross shared in different disorders Therefore accurate diagnosis and effective management are challenging Over the last decade advances in genomics and sequencing platforms have accelerated the understanding of how candidate genes contribute to the development of immunological disorders Significant progress has been made in discovering disease causing genes for rare monogenic immunological disorders especially in immunodeficiency syndrome These findings shed insights into disease mechanisms and facilitated the identification of new biomarkers that can help in diagnosis prognosis and development of novel clinical therapeutic approaches
