tearing down ableist social hierarchies and ensuring that all persons with disabilities everywhere were treated equally. Despite important progress the disability human rights project not only remains incomplete but has often created new hierarchies among persons with disabilities themselves or across the human rights it promotes. Certain groups of persons with disabilities have gained new voices while others remain silenced and certain rights are prioritized over others depending on what states international organizations or advocates want rather than what those on the ground need most. This volume was inspired both by the continued need to expose human rights violations against persons with disabilities but to also explore the nuanced role that hierarchies play in the spread implementation and protection of disability human rights. The enjoyment of human rights is not equal nor is the recognition of specific individuals and groups rights. In order to change this situation inequalities across the disability human rights movement must be explored. Divided into five parts: Who counts as disabled, Political social and cultural context, Which rights on top whose rights on bottom, Pushed to the periphery in the disability rights movement, Representations of disability and comprised of 34 newly written chapters including case studies from the Anglophone Caribbean, Bangladesh, Bosnia Herzegovina, China, Ghana, Haiti, Hungary, India, Israel, Kenya, Latin America, Poland, Russia, Scotland, Serbia and South Africa and other countries, this book will be of interest to all scholars and students of disability studies, sociology, human rights, law and social policy.

*Handbook of Hormones* Hironori Ando, Kazuyoshi Ukena, Shinji Nagata, 2021-07-29. *Handbook of Hormones: Comparative Endocrinology for Basic and Clinical Research*, Second Edition, presents a catalog of fundamental information on the structure and function of hormones from basic biology to clinical use, offering a rapid way to obtain specific facts about the chemical and molecular characteristics of hormones, their receptors, signaling pathways and the biological activities they regulate. The book's stellar editorial board, affiliated with the Japan Society for Comparative Endocrinology, brings together authors that present a compelling structure of each hormone with a consistent presentation that provides a primer surrounding the plethora of hormones that now exist. Comparative endocrinology continues to rapidly expand and new information about hormones is being produced almost daily, making it important to stay up to date. Hormone paracrine and autocrine factors have been identified as key players in a range of different systems including immune, musculoskeletal and cardiovascular. Frontiers between disciplines are being blurred and many scientists in fields other than endocrinology are interested in hormones. Scientists now have the unprecedented opportunity to look from invertebrates to vertebrate and identify novel regulatory factors and understand their function and how they determine an organism's physiology and survival. Presents hormones in groups according to their origin so that readers can easily understand their inter relation. Includes 47 new hormones such as neuropeptides, cytokines, growth hormones, biogenic amines and amino acids that are important for cell to cell communication via endocrine, paracrine and neurotransmitter signaling. Summarizes the current knowledge of hormone evolution based on comparative genome resources such as synteny, genome sequence and comprehensive phylogeny. Covers a wide range of information on hormones.
