**Curriculum Theorising, and the Theoriser**, 2020-12-29 Curriculum studies is at the core of the educational endeavour and informs what happens in every educational institution. As a result of its criticality or primacy, every educational practitioner appears to claim expertise in curriculum matters and what direction the field should take. In Africa, the curriculum practitioner has been given little or no space to theorise and orient the future of the field. In Africa, instead, European and American curriculum theorists have been allowed to exert a marked influence on the nature and direction of African theoretical and philosophical underpinnings. This situation raises fundamental questions about the future of education in Africa, and this volume explores and answers these questions relating to curriculum theory, theorising, and the theoriser by breaking traditions and experimenting on alternative approaches and pathways. International Conference on Education and Management Science (ICEMS2014), 2014-09-24 2014 International Conference on Education and Management Science ICEMS2014 will be held in Beijing, China, on August 19-20, 2014. The main purpose of this conference is to provide a common forum for researchers, scientists, and students from all over the world to present their recent findings, ideas, developments, and application in the border areas of Education and Management Science. It will also report progress and development of methodologies, technologies, planning, and implementation tools and standards in information systems. Education is an internal topic. It is a process of delivering knowledge in a basic meaning. Humans are hard to define the actual definition of education. But it is the key point for our society to step forward. Management science is the discipline that adapts the scientific approach for problem solving to help managers making informed decisions. The goal of management science is to recommend the course of action that is expected to yield the best outcome with what is available. **Flood Monitoring and Detection** Salvatore Manfreda, Caterina Samela, Alberto Refice, Valerio Tramutoli, Fernando Nardi, 2020-11-13 Climate change and land use transformations have induced an increased flood risk worldwide. These phenomena are dramatically impacting ordinary life and the economy. Research and technology offer a new strategy to quantify and predict such phenomena and also mitigate the impact of flooding. In particular, the growing computational power is offering new strategies for a more detailed description of the flooding over large scales. This book offers an overview of the most recent outcomes of the research on this argument.
