memories from which personal experiences are regenerated in a never ending cycle of activity Baer explores the idea that our personal feelings are undeniable facts that have been systematically excluded from the basic sciences thereby leaving us with a schizophrenic division between objective materialism and spiritual idealism Cognitive Action Theory CAT achieves this unification by recognizing that the observer's existence is the foundational premise underlying all scientific inquiry It develops as an event oriented physical theory in which the first person observer is central By analyzing the methods through which we human observers gain knowledge and create the belief systems within which our experiences are explained we discover a fundamental truth all systems are observers and exhibit some form of internal awareness Events not the objects appearing in them are the fundamental building blocks of reality The book is comprised of three parts the first addresses the paradigm shift from an object to an event oriented world view the second develops the foundations of action physics for an event oriented world view and the third provides examples of how these new ideas can be applied to move our knowledge up the next evolutionary step of human development This book will benefit anyone questioning their role in the universe especially those in interdisciplinary fields of philosophy psychology neuroscience and medicine who seek understanding of quantum theory as the physics of conscious systems that know the world **Resources in Education** ,1995 **Solid**

**Being Reasonable About Religion** William Charlton, 2017-11-30 When we start to discuss religion we run into controversial questions about history and anthropology about the scope of scientific explanation and about free will good and evil This book explains how to find our way through these disputes and shows how we can be freed from assumptions and prejudices which make progress impossible by deeper philosophical insight into the concepts involved Books about religion usually concentrate on a few central Judaeo Christian doctrines and either attack them or defend them with tenacious conservatism yielding nothing This book has a broader scope and instead of trying to prove that religion or any particular religion is reasonable or unreasonable it seeks to persuade people to be reasonable about religion

*Principles of Cognition, Language and Action* N. Praetorius, 2012-12-06 This book addresses a growing concern as to why Psychology now more than a hundred years after becoming an independent research area does not yet meet the basic requirements of a scientific discipline on a par with other sciences such as physics and biology These requirements include agreement on definition and delimitation of the range of features and properties of the phenomena or subject matter to be investigated secondly the development of concepts and methods which unambiguously specify the phenomena and systematic investigation of their features and properties A third equally important requirement implicit in the first two is exclusion from enquiry of all other matters with which the discipline is not concerned To these requirements must then be added the development of basic assumptions about the nature of what is under investigation and of principles to account for its properties and to serve as a guide as to what are relevant questions to ask and theories to develop about them
