What We Think About When We Try Not To Think About Global Warming Per Espen Stoknes, 2015 Today about 98 percent of scientists affirm that climate change is human made and about 2 percent still question it Despite that overwhelming majority though about half the population of rich countries like ours choose to believe the 2 percent And paradoxically this large camp of deniers grows even larger as more and more alarming proof of climate change has cropped up over the last decades This disconnect has both climate scientists and activists scratching their heads growing anxious and responding usually by repeating more facts to win the argument But the more climate facts pile up the greater the resistance to them grows and the harder it becomes to enact measures to reduce greenhouse gas emissions and prepare communities for the inevitable change ahead Is humanity up to the task It is a catch 22 that starts says psychologist and climate expert Per Espen Stoknes from an inadequate understanding of the way most humans think act and live in the world around them With dozens of examples he shows how to retell the story of climate change and apply communication strategies more fit for the task Publisher s description [Optimizing the U.S. Ground-Based Optical and Infrared Astronomy System](#) National Research Council, Division on Engineering and Physical Sciences, Board on Physics and Astronomy, Committee on a Strategy to Optimize the U.S. Optical and Infrared System in the Era of the Large Synoptic Survey Telescope (LSST), 2015-06-26 New astronomical facilities such as the under construction Large Synoptic Survey Telescope and planned 30 meter class telescopes and new instrumentation on existing optical and infrared OIR telescopes hold the promise of groundbreaking research and discovery How can we extract the best science from these and other astronomical facilities in an era of potentially flat federal budgets for both the facilities and the research grants Optimizing the U S Ground Based Optical and Infrared Astronomy System provides guidance for these new programs that align with the scientific priorities and the conclusions and recommendations of two National Research Council NRC decadal surveys New Worlds New Horizons for Astronomy and Astrophysics and Vision and Voyages for Planetary Sciences in the Decade 2013 2022 as well as other NRC reports This report describes a vision for a U S OIR System that includes a telescope time exchange designed to enhance science return by broadening access to capabilities for a diverse community an ongoing planning process to identify and construct next generation capabilities to realize decadal science priorities and near term critical coordination planning and instrumentation needed to usher in the era of LSST and giant telescopes **SOUVENIR of 3rd International Science Congress ISC-2013** Prof. Dipak Sharma, International Science Congress Association organized 3rd International Science Congress ISC 2013 with Innovation with Global Responsibility as its Focal Theme ISC 2013 is divided in 20 sections A total number of 900 Research Papers and 1000 registrations from 36 countries all over the world have been received They are mainly from India Iran Sudan Iraq South Africa Phillipines Pakistan Nighana Erode Czech Republic Bangladesh Swaziland Jordan USA Thailand Japan Malaysia Kazakhstan UK Colombia Nepal Italy Bulgariya Cameroun France Greece Kazakhstan

The G20 and the Future of International Economic Governance Mike Callaghan, Tristram Sainsbury, 2015-10-01 The G20 needs to be bold and pragmatic if it is to deal effectively with the global economy s big issues Since its establishment in 1999 the G20 has become a key international forum But it suffers from inherent design flaws and remains a work in progress When Australia began its presidency of the 2014 summit in Brisbane many commentators suggested that Australia s chairing of the G20 would reinvigorate it This timely book looks at what was achieved at the Brisbane Summit and what has happened in its wake Crucially it explores what role the G20 could and should play in dealing with such pressing global issues as international taxation trade energy and climate change Expert contributors many of them former inside players assess the impact of the summit in the context of the year s broader

geopolitical challenges including Russia's temporary expulsion from the G8 and the failure of the US to ratify its governance reforms to the IMF. Taking stock, contributors question the effectiveness of the G20 and identify the reforms that are needed if it is to offer strong leadership in an integrated global economy. Climate Change Adaptation and Food Supply Chain Management Ari Paloviita, Marja Järvelä, 2015-08-20 The success of the entire food supply chain depends on the prosperity of farms and local communities. The direct climate change risks faced by the agricultural sector are therefore also risks to businesses and food supply chains. Hence the importance of resilience at farm level, community level, and business level when looking at food supply chain policy and management. **Climate Change Adaptation and Food Supply Chain Management** highlights the issue of adaptation to climate change in food supply chains, the management and policy implications, and the importance of supply chain resilience. Attention is given to each phase of the supply chain: input, production, agriculture, food processing, retailing, consumption, and post-consumption. European case studies demonstrate the vulnerabilities of contemporary food supply chains, the opportunities and competitive advantages related to climate change, and the transdisciplinary challenges related to successful climate adaptation. The authors argue for a redefinition of the way food supply chains are operated, located, and coordinated, and propose a novel approach enhancing climate resilient food supply chain policy and management. This book will be of interest to students, researchers, practitioners, and policymakers in the field of climate adaptation and food supply chain management and policy.

Research Handbook on Climate Governance Karin Bäckstrand, Eva Lövbrand, 2015-11-27 The 2009 United Nations climate conference in Copenhagen is often represented as a watershed in global climate politics when the diplomatic efforts to negotiate a successor agreement to the Kyoto Protocol failed and was replaced by a fragmented and decentralized climate governance order. In the post-Copenhagen landscape, the top-down universal approach to climate governance has gradually given way to a more complex hybrid and dispersed political landscape involving multiple actors, arenas, and sites. The Handbook contains contributions from more than 50 internationally leading scholars and explores the latest trends and theoretical developments of the climate governance scholarship.

Singapore John Curtis Perry, 2017-01-04 Singapore has gained a reputation for being one of the wealthiest and best educated countries in the world and one of the brightest success stories for a colony turned sovereign state, but the

country's path to success was anything but assured. Its strategic location and natural resources both allowed Singapore to profit from global commerce and also made the island an attractive conquest for the world's naval powers, resulting in centuries of stunting colonialization. In *Singapore: Unlikely Power*, John Curtis Perry provides an evenhanded and authoritative history of the island nation that ranges from its Malay origins to the present day. Singapore's development has been aided by its greatest natural blessing: a natural deepwater port shielded by mountain ranges from oceanic storms and which sits along one of the most strategic straits in the world, cementing the island's place as a major shipping entrepot throughout modern history. Perry traces the succession of colonizers beginning with China in the fourteenth and fifteenth centuries and followed by the island's most famous colonizer, Britain, which ruled Singapore until the 1960s, excluding the Japanese occupation of World War II. After setting a historical context, Perry turns to the era of independence beginning in the 1960s. Plagued with corruption, inequality, lack of an educated population, Singapore improbably vaulted from essentially third-world status into a first-world dynamo over the course of three decades, with much credit due to longtime leader Lee Kuan Yew, Singapore's first prime minister, who led the country for over three decades, who embraced the colonial past, established close ties with former foe Japan, and adopted a resolutely pragmatist approach to economic development. His efforts were successful, and Singapore today is a model regime for other developing states. Singapore's stunning transformation from a poor and corrupt colonial backwater into an economic powerhouse renowned for its wealth, order, and rectitude is one of the great and most surprising success stories of modern era. Singapore is an accessible, comprehensive, and indeed colorful overview of one of the most influential political-economic models in the world and is an enlightening read for anyone interested in how Singapore achieved the unachievable.

Artificial

Intelligence Saswat Sarangi, Pankaj Sharma, 2018-09-03 What will the future be? A dystopian landscape controlled by machines or a brave new world full of possibilities? Perhaps the answer lies with Artificial Intelligence (AI), a phenomenon much beyond technology that has continued to and will shape lives in ways we do not understand yet. This book traces the evolution of AI in contemporary history. It analyses how AI is primarily being driven by capital as the only factor of production and its consequences for the global political economy. It further explores the dystopian prospect of mass unemployment by AI and takes up the ethical aspects of AI and its possible use in undermining natural and fundamental rights. A tract for the times.
