The Politics of Climate Change Knowledge Nowrin Tabassum, 2022-03-03 This book addresses political knowledge of climate change and its relation to labelling people affected by climate change either as climate refugees or as climate change induced displaced people or migrants By questioning the knowledge of climate change and subsequent labelling of people this book will spark debate in studies of global climate politics and transnational policy networks Rather than considering the issue of climate change as a given phenomenon the author explores how the politicized knowledge of climate change has been produced in international negotiations and how that knowledge is transmitted from global forums to local country levels via climate change action plans and resilience projects This book introduces the concept of multi scalar knowledge brokers MKBs individual actors who work at multiple levels local national and international to transmit the knowledge of climate change from global level to local level The author uses the primary case study of Bangladesh to demonstrate how the dominant actors in global climate politics the Intergovernmental Panel on Climate Change IPCC the United Nations Framework Convention on Climate Change UNFCCC and the World Bank as well as the USA and the UK interact with the government and local NGOs in Bangladesh regarding transmitting the knowledge of climate change labelling the uprooted people and implementing resilience projects This book will be of interest to students scholars and practitioners of international relations environmental politics climate change studies political ecology political geography and migration and displacement studies The Open Access version of this book available at www.taylorfrancis.com has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license Thanks to the support of libraries working with Knowledge Unlatched www.knowledgeunlatched.org

Climate Change Adaptation and Development John Carstensen, 2018-04-19 Climate change is real and it is man made We have put so many greenhouse gas pollutants into the atmosphere that we will see significant and long term change that we need to adapt and adjust to It is important for development practitioners to understand these impacts and the challenge of how and when to adapt to climate change There are plenty of grim presentations of what the extremes of the possible climate scenarios will throw at us over the next 100 years but not all change will be disastrous some change will be beneficial but much of the change will happen at an unprecedented rate that will require the best possible analysis and understanding of how and when we should adapt to climate change This is

important for development practitioners as we invest in ensuring that poverty is reduced and eliminated and the well being of everyone is improved Many countries and communities around the world are vulnerable to the impacts of climate change but developing economies may on one hand be less resilient to the impact but could on the other hand be in a better position to make their development climate smart by making the most efficient use of their economic resources The chapters in this book shine a light on the complexity and the multi dimensional aspects of climate change adaptation They gather some of the experiences of addressing climate change impacts in a development context This book was previously published as a special issue of Development in Practice **Climate Change in South Asia: Further Need for Mitigation and Adaptation**

Ruchir Agarwal,Vybhavi Balasundharam,Patrick Blaggrave,Ragnar Gudmundsson,Racha Mousa,2021-08-20 The South Asia region is both a large contributor to climate change and also one of the regions most vulnerable to climate change This paper provides an overview of the region s vulnerabilities national commitments to mitigate emissions and national policies to adapt to a changing climate The paper also discusses policy measures that may be needed to make further progress on both mitigation and adaptation Our analysis suggests that while substantial progress is being made there remains scope to adopt a more cohesive strategy to achieve the region s goals including by improving the monitoring and tracking of adaptation spending and by laying the groundwork to equitably increase the effective price of carbon while protecting low income and vulnerable households in the region *Climate Change 2014: Mitigation of Climate Change* Ottmar Edenhofer,2015-01-26

This latest Fifth Assessment Report of the IPCC will again form the standard reference for all those concerned with climate change and its consequences **Climate Change 2014: Mitigation of Climate Change** Intergovernmental Panel on Climate Change,2015-01-26 This latest Fifth Assessment Report of the Intergovernmental Panel on Climate Change IPCC will again form the standard reference for all those concerned with climate change and its consequences including students researchers and policy makers in environmental science meteorology climatology biology ecology atmospheric chemistry and environmental policy *General Studies & CSAT Solved Papers* YCT Expert Team , 2023 24 UPPCS Pre General Studies

CSAT Solved Papers *An Introduction to the Green Economy* Adrian C. Newton,Elena Cantarello,2014-08-13 The green economy is widely seen as a potential solution to current global economic and environmental crises and a potential mechanism by which sustainable development might be achieved in practice Considerable investments are now being made into the development of green technology renewable energy biodiversity conservation resource efficiency recycling of materials and green infrastructure This textbook provides a comprehensive introduction to the green economy using a strongly interdisciplinary approach based on environmental science rather than treating it as a sub set of economics The scientific principles of sustainability are presented which provide the foundations of the green economy with a particular focus on systems based approaches Examples of real world case studies are used to illustrate how the green economy can be achieved in practice In this way the authors provide a thorough overview of both the principles and practice of the green

economy drawing from a wide range of disciplines including ecology geography social science psychology sustainability science environmental science law and economics The emphasis is on presenting results of the latest research derived from leading scientific journals Rather than focusing on a single definition of what constitutes a green economy the book introduces readers to the diversity of opinion that exists and engages them in what is an active on going debate This reflects the fact that many aspects of the green economy and sustainable development more generally are currently contested In particular the book will help readers to strengthen their ability to critically evaluate the evidence for and against the views presented and to actively contribute to the future development of the green economy

A Pragmatist Orientation for the Social Sciences in Climate Policy Martin Kowarsch, 2016-09-01 While economic and other social science expertise is indispensable for successful public policy making regarding global climate change social scientists face trade offs between the scientific credibility policy relevance and legitimacy of their policy advice From a philosophical perspective this book systematically addresses these trade offs and other crucial challenges facing the integrated economic assessments of the Intergovernmental Panel on Climate Change IPCC Based on John Dewey s pragmatist philosophy and an analysis of the value laden nature and reliability of climate change economics the book develops a refined science policy model and specific guidelines for these assessments of climate policy options The core idea is to scientifically explore the various practical implications of alternative climate policy pathways in an interdisciplinary manner together with diverse stakeholders This could facilitate an iterative deliberative public learning process concerning disputed policy issues This volume makes novel contributions to three strands of the literature 1 the philosophy of social science in policy 2 the philosophy of economics and 3 debates about the design of scientific assessments including the continuous IPCC reform debate This work is thus interesting for philosophers and other scholars reflecting on the science policy interface but also for assessment practitioners climate policy makers and economists The science policy approach developed in this volume has already influenced the recent socio economic IPCC assessment

International Climate Change Law Daniel Bodansky, Jutta Brunnée, Lavanya Rajamani, 2017-06-08 This textbook by three experts in the field provides a comprehensive overview of international climate change law Climate change is one of the fundamental challenges facing the world today and is the cause of significant international concern In response states have created an international climate regime The treaties that comprise the regime the 1992 United Nations Framework Convention on Climate Change the 1997 Kyoto Protocol and the 2015 Paris Agreement establish a system of governance to address climate change and its impacts This book provides a clear analytical guide to the climate regime as well as other relevant international legal rules The book begins by locating international climate change law within the broader context of international law and international environmental law It considers the evolution of the international climate change regime and the process of law making that has led to it It examines the key provisions of the Framework Convention the Kyoto Protocol and the Paris Agreement It analyses the principles and obligations that underpin

the climate regime as well as the elaborate institutional and governance architecture that has been created at successive international conferences to develop commitments and promote transparency and compliance The final two chapters address the polycentric nature of international climate change law as well as the intersections of international climate change law with other areas of international regulation This book is an essential introduction to international climate change law for students scholars and negotiators
