Time And Science - Volume 3: Physical Sciences And Cosmology Remy Lestienne, Paul Harris, 2023-06-22 The present volume of Time and Science series is devoted to Physical Sciences and Cosmology Today more than ever the question is Time an ontological property a necessary ingredient for the physical description of the world or a purely epistemological element relative to our situation in the world worry physicists and cosmologists alike For many of them Relativity and particularly General Relativity as well as its reconciliation with quantum mechanics in the elaboration of a quantum theory of gravitation points to a negative answer to the first alternative and leads them to deny the objective reality of time For others the answer is nuanced by the evidence of an emerging temporal property when one climbs the scales of the complexity of systems and or the applicability of the statistical laws of thermodynamics But for some the illusion of the unreality of time comes from certain confusions that they denounce and plead for the re establishment of time at the heart of physical theories

Innovation in Legacy Sectors William B. Bonvillian, Charles Weiss, 2015-08-18 The American economy faces two deep problems expanding innovation and raising the rate of quality job creation Both have roots in a neglected problem the resistance of Legacy economic sectors to innovation While the U S has focused its policies on breakthrough innovations to create new economic frontiers like information technology and biotechnology most of its economy is locked into Legacy sectors defended by technological economic political social paradigms that block competition from disruptive innovations that could challenge their models Americans like to build technology covered wagons and take them out west to open new innovation frontiers we don't head our wagons back east to bring innovation to our Legacy sectors By failing to do so the economy misses a major opportunity for innovation which is the bedrock of U S competitiveness and its standard of living

Technological Innovation in Legacy Sectors uses a new unifying conceptual framework to identify the shared features underlying structural obstacles to innovation in major Legacy sectors energy air and auto transport the electric power grid buildings manufacturing agriculture health care delivery and higher education and develops approaches to understand and transform them It finds both strengths and obstacles to innovation in the national innovation environments a new concept that combines the innovation system and the broader innovation context for a group of Asian and European economies Manufacturing is a major Legacy sector that presents a particular challenge because it is a critical stage in the innovation process By increasingly offshoring production the U S is losing important parts of its innovation capacity Innovate here produce here where the U S took all the gains of its strong innovation system at every stage is being replaced by innovate here produce there which threatens to lead to produce there innovate there To bring innovation to Legacy sectors authors William Bonvillian and Charles Weiss recommend that policymakers focus on all stages of innovation from research through implementation They should fill institutional gaps in the innovation system and take measures to address structural obstacles to needed disruptive innovations In the specific case of advanced manufacturing the production ecosystem can be recreated to reverse jobless innovation and add manufacturing led innovation to the U S s still strong research oriented innovation system

Innovation Discovery: Network Analysis Of Research And Invention Activity For Technology Management Tugrul U Daim,James Robert Alan Pilkington,2018-01-23 The use of bibliometrics for the analysis of technology management is on the rise in our increasingly technological societies Many are using these tools to document or record the rise of various technologies making it necessary to take stock of the value and application of scientometric methods and their measures Innovation Discovery shows the current state of play within the field of management of technology and discusses how we can use networks to explore understand and generate theory around the innovation process It looks at the different streams of analysis used to understand bibliometric data and presents alternative and novel ways of applying these techniques Written as a comprehensive review of approaches by leading researchers in the field this book is suitable for graduate and post graduate students and researches looking to expand their knowledge and embark on further investigations in technology management

Improving Flood Prediction Assimilating Uncertain Crowdsourced Data into Hydrologic and Hydraulic Models Maurizio Mazzoleni,2017-03-16 In recent years the continued technological advances have led to the spread of low cost sensors and devices supporting crowdsourcing as a way to obtain

observations of hydrological variables in a more distributed way than the classic static physical sensors. The main advantage of using these type of sensors is that they can be used not only by technicians but also by regular citizens. However, due to their relatively low reliability and varying accuracy in time and space, crowdsourced observations have not been widely integrated in hydrological and/or hydraulic models for flood forecasting applications. Instead, they have generally been used to validate model results against observations in post event analyses. This research aims to investigate the benefits of assimilating the crowdsourced observations coming from a distributed network of heterogeneous physical and social static and dynamic sensors within hydrological and hydraulic models in order to improve flood forecasting. The results of this study demonstrate that crowdsourced observations can significantly improve flood prediction if properly integrated in hydrological and hydraulic models. This study provides technological support to citizen observatories of water in which citizens not only can play an active role in information capturing, evaluation and communication leading to improved model forecasts and better flood management.

Life Cycle Analysis and Assessment in Civil Engineering: Towards an Integrated Vision

Robby Caspeele, Luc Taerwe, Dan M. Frangopol, 2018-10-15. This volume contains the papers presented at IALCCE2018, the Sixth International Symposium on Life Cycle Civil Engineering, IALCCE2018, held in Ghent, Belgium, October 28-31, 2018. It consists of a book of extended abstracts and a USB device with full papers, including the Fazlur R. Khan lecture, 8 keynote lectures, and 390 technical papers from all over the world. Contributions relate to design, inspection, assessment, maintenance, or optimization in the framework of life cycle analysis of civil engineering structures and infrastructure systems. Life cycle aspects that are developed and discussed range from structural safety and durability to sustainability, serviceability, robustness, and resilience. Applications relate to buildings, bridges, and viaducts, highways, and runways, tunnels, and underground structures, offshore and marine structures, dams, and hydraulic structures, prefabricated design, infrastructure systems, etc. During the IALCCE2018 conference, a particular focus is put on the cross-fertilization between different sub-areas of expertise and the development of an overall vision for life cycle analysis in civil engineering. The aim of the editors is to provide a valuable source of cutting-edge information for anyone interested in life cycle analysis and assessment in civil engineering, including researchers, practising engineers, consultants, contractors, decision makers, and representatives from local authorities.

Climate Change Adaptation and Development Tor Håkon Inderberg, Siri Eriksen, Karen O'Brien, Linda Sygna, 2014-11-20. Climate change poses multiple challenges to development. It affects lives and livelihoods, infrastructure, and institutions, as well as beliefs, cultures, and identities. There is a growing recognition that the social dimensions of vulnerability and adaptation now need to move to the forefront of development policies and practices. This book presents case studies showing that climate change is as much a problem of development as for development, with many of the risks closely linked to past, present, and future development pathways. Development policies and practices can play a key role in addressing climate change, but it is critical to question to what extent such actions and interventions reproduce rather than address the social

and political structures and development pathways driving vulnerability The chapters emphasise that adaptation is about much more than a set of projects or interventions to reduce specific impacts of climate change it is about living with change while also transforming the processes that contribute to vulnerability in the first place This book will help students in the field of climate change and development to make sense of adaptation as a social process and it will provide practitioners policymakers and researchers working at the interface between climate change and development with useful insights for approaching adaptation as part of a larger transformation to sustainability *Techno-Vernacular Creativity and Innovation* Nettrice R. Gaskins, 2021-08-10 A novel approach to STEAM learning that engages students from historically marginalized communities in culturally relevant and inclusive maker education The growing maker movement in education has become an integral part of both STEM and STEAM learning tapping into the natural DIY inclinations of creative people as well as the educational power of inventing or making things And yet African American Latino a American and Indigenous people are underrepresented in maker culture and education In this book Nettrice Gaskins proposes a novel approach to STEAM learning that engages students from historically marginalized communities in culturally relevant and inclusive maker education Techno vernacular creativity TVC connects technical literacy equity and culture encompassing creative innovations produced by ethnic groups that are often overlooked TVC uses three main modes of activity reappropriation remixing and improvisation Gaskins looks at each of the three modes in turn guiding readers from research into practice Drawing on real world examples she shows how TVC creates dynamic learning environments where underrepresented ethnic students feel that they belong Students who remix computationally for instance have larger toolkits of computational skills with which to connect cultural practices to STEAM subjects reappropriation offers a way to navigate cultural repertoires improvisation is firmly rooted in cultural and creative practices Finally Gaskins explores an equity oriented approach that makes a distinction between conventional or dominant pedagogical approaches and culturally relevant or responsive making methods and practices She describes TVC habits of mind and suggests methods of instructions and projects **Driving Towards a More**

methodology followed in the chapters involves critical survey of existing literature case studies field survey and use of econometric techniques as well as statistical tools of index construction While contributors are primarily scholars from neo classical economics discipline some are intellectuals from the field of political economy and development studies Given the wide array of development perspectives this book is of interest not only to students and researcher of development economics social science and management but also a valuable reading for development practitioners and policy makers who would be interested in understanding how community and public institutions interact to determine access to health education and social security services that shapes the wellbeing of disadvantaged populations The lessons and implications are extremely pertinent to other emerging economies in particular those in South Asia

Racial Segregation and Eugenical Science Between the Wars Michael L. Blakey, 2025-07-18 This volume examines the rise and decline of racial science and its relationship to the political and social imposition of Jim Crow in the American South a racialized code of laws grounded upon an inherently racist and prejudicial pseudoscience The author argues here that the study of human beings within the emerging 18th and 19th century institutions of Western science was corrupted by the limited social intuitions of its enslaving colonizing and elitist members Western science and White societies plowed forward in continued ideological adherence to a biodeterministic imagination to justify slavery then Jim Crow racial segregation immigration restriction and other deadly and exploitative eugenical solutions of Social Darwinist thought The story is further complexified by the countervailing theories and voices of Black and Jewish intellectuals in the social and biocultural sciences in the 19th and 20th centuries such as Frederick Douglass W E B Du Bois and Montague Cobb These had profound consequences not only for the social sciences but also for the cultural life of Black Americans in the aftermath and afterlife of slavery At the same time even here the author discloses that the racialized dimensions of social science could not be fully exorcised as social science continued to construct soft line racism in that it selectively primitivized darker people and omitted White racism and colonialism from their human story African American social scientists and historians brought White racism and Black modernity to the fore Eugenics had begun to paint marginal White people Jewish and Italian immigrants to the United States as natural inferiors to Nordics or Aryans with devastating consequences in World War II Europe As the War ended the world community began its turn against racism in science and society In constructing this historical and sociological counternarrative the author provides a critical new social history that illuminates a tangled and turgid past for contemporary readers students and researchers with vital insights for anthropology sociology history cultural studies philosophy and American studies
