Chemical Energy from Natural and Synthetic Gas Yatish T. Shah, 2017-03-16 Commercial development of energy from renewables and nuclear is critical to long term industry and environmental goals However it will take time for them to economically compete with existing fossil fuel energy resources and their infrastructures Gas fuels play an important role during and beyond this transition away from fossil fuel dominance to a balanced approach to fossil nuclear and renewable energies Chemical Energy from Natural and Synthetic Gas illustrates this point by examining the many roles of natural and synthetic gas in the energy and fuel industry addressing it as both a transition and end game fuel The book describes various types of gaseous fuels and how they are recovered purified and converted to liquid fuels and electricity generation and used for other static and mobile applications It emphasizes methane

syngas and hydrogen as fuels although other volatile hydrocarbons are considered It also covers storage and transportation infrastructure for natural gas and hydrogen and methods and processes for cleaning and reforming synthetic gas The book also deals applications such as the use of natural gas in power production in power plants engines turbines and vehicle needs Presents a unified and collective look at gas in the energy and fuel industry addressing it as both a transition and end game fuel Emphasizes methane syngas and hydrogen as fuels Covers gas storage and transport infrastructure Discusses thermal gasification gas reforming processing purification and upgrading Describes biogas and bio hydrogen production Deals with the use of natural gas in power production in power plants engines turbines and vehicle needs Profit, Accumulation, and Crisis in Capitalism Minqi Li, 2020-01-31 Karl Marx hypothesized that there is a long term tendency for the profit rate to fall in capitalist economies Immanuel Wallerstein hypothesized that capitalist development tends to drive up labor cost material cost and taxation cost This book evaluates Marx's and Wallerstein's hypotheses by studying the long term movement of the profit rate and contributing factors in major capitalist economies During the twentieth century leading capitalist economies largely succeeded in stabilizing the profit rate However the current decline of the profit rate in China may precipitate the global capitalist economy into a new major crisis As economic growth slows down in all major capitalist economies Marx's original hypothesis may be verified by the global economic events in the twenty first century UGC NET JRF 1st Paper Previous Questions Unit Wise : Unit VII - Data Interpretation (DI) Dheeraj Kumar Singh, *Melt Water Retention Processes in Snow and Firn on Ice Sheets and Glaciers: Observations and Modeling* W. Tad Pfeffer, Jason E. Box, Robert S. Fausto, Horst Machguth, 2018-11-08 Melt takes place where the surface of glaciers or ice sheets interacts with the atmosphere While the processes governing surface melt are fairly well understood the pathways of the meltwater from its origin to the moment it leaves a glacier system remain enigmatic It is not even guaranteed that meltwater leaves a glacier or ice sheet On Greenland for example only slightly more than 50% of the meltwater runs off The remainder mostly refreezes within the so called firn cover of the ice sheet This eBook contains 11 studies which tackle the challenge of understanding meltwater retention in snow and firn from various angles The studies focus both on mountain glaciers and on the Greenland ice sheet and address challenges such as measuring firn properties quantifying their influence on meltwater retention modelling firn processes and meltwater refreezing as well as unravelling the mechanisms within the recently discovered Greenland firn aquifers
