Avatar-Based Control, Estimation, Communications, and Development of Neuron Multi-Functional Technology Platforms Mkrttchian, Vardan, Aleshina, Ekaterina, Gamidullaeva, Leyla, 2019-12-27 Competition in today's global market offers strong motivation for the development of sophisticated tools within computer science. The neuron multi-functional technology platform is a developing field of study that regards the various interactive approaches that can be applied within this subject matter. As advancing technologies continue to emerge, managers and researchers need a compilation of research that discusses the advancements and specific implementations of these intelligent approaches with this platform. *Avatar Based Control Estimation Communications and Development of Neuron Multi Functional Technology Platforms* is a pivotal reference source that provides vital research on the application of artificial and natural approaches towards neuron-based programs. While highlighting topics such as natural intelligence, neurolinguistics, and smart data storage, this publication presents techniques, case studies, and methodologies that combine the use of intelligent artificial and natural approaches with optimization techniques for facing problems and combines many types of hardware and software with a variety of communication technologies to enable the development of innovative applications. This book is ideally designed for researchers, practitioners, scientists, field experts, professors, and students seeking current research on the optimization of avatar-based advancements in multifaceted technology systems.

Experience with Quantum Annealing Computation

Catherine McGeoch, Susan Mniszewski, Nicholas Chancellor, David Esteban Bernal Neira, 2024-09-18 The past decade has seen four generations of quantum annealing processors with qubit counts increasing from 512 on the D-Wave Two released in 2013 to over 5000 on Advantage processors available in 2023. During this time, expanding access for researchers has sparked enormous growth in publications and in the body of knowledge surrounding capabilities, applications, and best practices in use of these novel computing systems. This Research Topic will invite submissions on all aspects of empirical experience with annealing-based quantum computers. The intention is to present a broad survey of the current state of knowledge about quantum annealing hardware, performance, software, infrastructures, and applications.

Handbook of Artificial Intelligence Applications for Industrial Sustainability

Vikas Garg, Richa Goel, Pooja Tiwari, Esra S. Döngül, 2024-01-30 The subject of Artificial Intelligence (AI) is continuing on its journey of affecting each and every individual and will keep on this path in the times to come. This handbook is a collection of topics on the application of artificial intelligence applications for sustainability in different areas. It provides an insight into the various uses of concepts and practical examples for different domains all in one place, which makes it unique and important for the potential reader. *Handbook of Artificial Intelligence Applications for Industrial Sustainability: Concepts and Practical Examples* examines the influence of AI and how it can be used in several industries to improve corporate performance, reduce security concerns, improve customer experience, and ultimately generate value for customers and maximize profits. The handbook offers

practical examples concepts and applications that provide an easy understanding and implementation process It provides AI applications in many fields such as sustainable credit decisions cyber security and fraud prevention warehouse management and much more This handbook will provide insight to customers managers professionals engineers researchers and students on the various uses of AI and sustainability in different domains All of this needed information compiled into one handbook makes it unique and important for the engineering business and computer science communities

On Spatio-Temporal Data Modelling and Uncertainty Quantification Using Machine Learning and Information Theory Fabian Guignard,2022-03-12 The gathering and storage of data indexed in space and time are experiencing unprecedented growth demanding for advanced and adapted tools to analyse them This thesis deals with the exploration and modelling of complex high frequency and non stationary spatio temporal data It proposes an efficient framework in modelling with machine learning algorithms spatio temporal fields measured on irregular monitoring networks accounting for high dimensional input space and large data sets The uncertainty quantification is enabled by specifying this framework with the extreme learning machine a particular type of artificial neural network for which analytical results variance estimation and confidence intervals are developed Particular attention is also paid to a highly versatile exploratory data analysis tool based on information theory the Fisher Shannon analysis which can be used to assess the complexity of distributional properties of temporal spatial and spatio temporal data sets Examples of the proposed methodologies are concentrated on data from environmental sciences with an emphasis on wind speed modelling in complex mountainous terrain and the resulting renewable energy assessment The contributions of this thesis can find a large number of applications in several research domains where exploration understanding clustering interpolation and forecasting of complex phenomena are of utmost importance

Pattern Recognition, Computer Vision, and Image Processing. ICPR 2022 International Workshops and Challenges Jean-Jacques Rousseau,Bill Kapralos,2023-08-01 This 4 volumes set constitutes the proceedings of the ICPR 2022 Workshops of the 26th International Conference on Pattern Recognition Workshops ICPR 2022 Montreal QC Canada August 2023 The 167 full papers presented in these 4 volumes were carefully reviewed and selected from numerous submissions ICPR workshops covered domains related to pattern recognition artificial intelligence computer vision image and sound analysis Workshops contributions reflected the most recent applications related to healthcare biometrics ethics multimodality cultural heritage imagery affective computing etc

Deep Learning Methods and Applications in Brain Imaging for the Diagnosis of Neurological and Psychiatric Disorders Hao Zhang, Da Ma, Lei Wang,2024-10-14 Brain imaging has been successfully used to generate image based biomarkers for various neurological and psychiatric disorders such as Alzheimer s and related dementias Parkinson s disease stroke traumatic brain injury brain tumors depression schizophrenia etc However accurate brain image based diagnosis at the individual level remains elusive and this applies to the diagnosis of neuropathological diseases as well as clinical syndromes In recent years deep learning techniques due to their ability to learn

complex patterns from large amounts of data have had remarkable success in various fields such as computer vision and natural language processing Applying deep learning methods to brain imaging assisted diagnosis while promising is facing challenges such as insufficiently labeled data difficulty in interpreting diagnosis results variations in data acquisition in multi site projects integration of multimodal data clinical heterogeneity etc The goal of this research topic is to gather cutting edge research that showcases the application of deep learning methods in brain imaging for the diagnosis of neurological and psychiatric disorders We encourage submissions that demonstrate novel approaches to overcome various abovementioned difficulties and achieve more accurate reliable generalizable and interpretable diagnosis of neurological and psychiatric disorders in this field

Human-in-the-Loop Robot Control and Learning Luka Peternel, Jan Babič, Erhan Oztop, Tetsunari Inamura, Dingguo Zhang, 2020-01-22 In the past years there has been considerable effort to move robots from industrial environments to our daily lives where they can collaborate and interact with humans to improve our life quality One of the key challenges in this direction is to make a suitable robot control system that can adapt to humans and interactively learn from humans to facilitate the efficient and safe co existence of the two The applications of such robotic systems include service robotics and physical human robot collaboration assistive and rehabilitation robotics semi autonomous cars etc To achieve the goal of integrating robotic systems into these applications several important research directions must be explored One such direction is the study of skill transfer where a human operator's skilled executions are used to obtain an autonomous controller Another important direction is shared control where a robotic controller and humans control the same body tool mechanism car etc Shared control in turn invokes very rich research questions such as co adaptation between the human and the robot where the two agents can benefit from each other's skills or must adapt to each other's behavior to achieve effective cooperative task executions The aim of this Research Topic is to help bridge the gap between the state of the art and above mentioned goals through novel multidisciplinary approaches in human in the loop robot control and learning

The Oxford Handbook of Computational Linguistics Ruslan Mitkov, 2022 Provides a comprehensive account of current research in computational linguistics Fully revised and updated throughout including 37 new chapters Features an extended glossary to explain key terms and concepts Book jacket

Robotics, Computer Vision and Intelligent Systems Joaquim Filipe, Juha Röning, 2024-05-07 This volume constitutes the proceedings of the 4th International Conference on Robotics Computer Vision and Intelligent Systems ROBOVIS 2024 which was held in Rome Italy during February 25-27 2024 The 8 full papers and 21 short papers are presented in this book were carefully reviewed and selected from 33 submissions They focus on topics on research and development in robotics computer vision and intelligent systems

Automated Pattern Recognition of Communication Behaviour in Electronic Business Negotiations Muhammed Fatih Kaya, 2023-01-19 The world of digitalisation is changing the way how people and business companies communicate with each other Electronic negotiations represent one of the most important forms of business communication and can influence the successes and

failures of companies in a significant way whether in interorganisational or intraorganisational processes Analysing negotiation interactions to determine pattern based peculiarities in the communication offers new value adding information concerning the management of optimised communication processes even though the machine based processing of communication data bears a series of challenges The present book develops a new approach to analyse the automated pattern recognition potential of Machine Learning methods in unstructured negotiation communication It presents holistic research frameworks for the effective detection of structural patterns and reveals the pattern labelling potential in high dimensional communication data by analytically implementing a series of Machine Learning methods

Deep Learning and Neural Networks: Concepts, Methodologies, Tools, and Applications Management Association, Information Resources,2019-10-11 Due to the growing use of web applications and communication devices the use of data has increased throughout various industries It is necessary to develop new techniques for managing data in order to ensure adequate usage Deep learning a subset of artificial intelligence and machine learning has been recognized in various real world applications such as computer vision image processing and pattern recognition The deep learning approach has opened new opportunities that can make such real life applications and tasks easier and more efficient Deep Learning and Neural Networks Concepts Methodologies Tools and Applications is a vital reference source that trends in data analytics and potential technologies that will facilitate insight in various domains of science industry business and consumer applications It also explores the latest concepts algorithms and techniques of deep learning and data mining and analysis Highlighting a range of topics such as natural language processing predictive analytics and deep neural networks this multi volume book is ideally designed for computer engineers software developers IT professionals academicians researchers and upper level students seeking current research on the latest trends in the field of deep learning
