Automated Essay Scoring Beata Beigman Klebanov, Nitin Madnani, 2021-11-12 This book discusses the state of the art of automated essay scoring its challenges and its potential One of the earliest applications of artificial intelligence to language data along with machine translation and speech recognition automated essay scoring has evolved to become both a revenue generating industry and a vast field of research with many subfields and connections to other NLP tasks In this book we review the developments in this field against the backdrop of Elias Page s seminal 1966 paper titled The Imminence of Grading Essays by Computer Part 1 establishes what automated essay scoring is about why it exists where the technology stands and what are some of the main issues In Part 2 the book presents guided exercises to illustrate how one would go about building and evaluating a simple automated scoring system while Part 3 offers readers a survey of the literature on different types of scoring models the aspects of essay quality studied in prior research and the implementation and evaluation of a scoring engine Part 4 offers a broader view of the field inclusive of some neighboring areas and Part ref part5 closes with summary and discussion This book grew out of a week long course on automated evaluation of language production at the North American Summer School for Logic Language and Information NASSLLI attended by advanced undergraduates and early stage graduate students from a variety of disciplines Teachers of natural language processing in particular will find that the book offers a useful foundation for a supplemental module on automated scoring Professionals and students in linguistics applied linguistics educational technology and other related disciplines will also find the material here useful

Hierarchical Object Representations in the Visual Cortex and Computer Vision Antonio Rodríguez-Sánchez, Mazyar Fallah, Ales Leonardis, 2016-06-08 Over the past 40 years neurobiology and computational neuroscience has proved that deeper understanding of visual processes in humans and non human primates can lead to important advancements in computational perception theories and systems One of the main difficulties that arises when designing automatic vision systems is developing a mechanism that can recognize or simply find an object when faced with all the possible variations that may occur in a natural scene with the ease of the primate visual system The area of the brain in primates that is dedicated at analyzing visual information is the visual cortex The visual cortex performs a wide variety of complex tasks by means of simple operations These seemingly simple operations are applied to several

layers of neurons organized into a hierarchy the layers representing increasingly complex abstract intermediate processing stages In this Research Topic we propose to bring together current efforts in neurophysiology and computer vision in order 1 To understand how the visual cortex encodes an object from a starting point where neurons respond to lines bars or edges to the representation of an object at the top of the hierarchy that is invariant to illumination size location viewpoint rotation and robust to occlusions and clutter and 2 How the design of automatic vision systems benefit from that knowledge to get closer to human accuracy efficiency and robustness to variations

Neuromechanics and Control of Physical Behavior: from Experimental and Computational Formulations to Bio-inspired Technologies Massimo Sartori,Francisco J. Valero-Cuevas,Alfred C. Schouten,Matthew Tresch,Yoshihiko Nakamura,Manish Sreenivasa,2019-08-15 The term neuromechanics defines an integrative approach that combines the neuromuscular control and the biomechanical aspects of physical behavior in humans and animals Crucial to this approach is a detailed description and modeling of the interaction between the nervous system and the controlled biomechanical plant Only then do we have the broader context within which

to understand evolution movement mechanics neural control energetics disability and rehabilitation In addition to enabling new basic science directions understanding the interrelations between movement neural and mechanical function should also be leveraged for the development of personalized wearable technologies to augment or restore the motor capabilities of healthy or impaired individuals Similarly this understanding will empower us to revisit current approaches to the design and control of robotic and humanoid systems to produce truly versatile human like physical behavior and adaptation in real world environments This Research Topic is therefore poised at an opportune moment to promote understanding of apparently disparate topics into a coherent focus

Dawn of The Coruscus Maximillian Q. Letizi, 2013-02-26 This novel starts with a prologue dealing with the mythology surrounding the development of two different species of mankind the group of people designated as Homo Sapiens and the much smaller subtype known as Cro Magnon Man The action starts immediately with the two groups clashing and then differentiating into the development of civilizations populated by Homo Sapiens but mentored by Cro Magnon known as the Coruscus As the adventure develops other themes come into play The capacity of the Coruscus to influence the whims of nature has been characterized by numerous titles the most common of which is known as magic Magic is the undercurrent of this action adventure but there are more themes which become sophisticated in both concept and presentation For example the idea of life beyond death is explored There are detailed descriptions of Virgil's journey into the realms of life beyond this physical plane There are also metaphysical themes running through this novel with detailed descriptions of chakra meditations as necessary preparations for Virgil to enter into the realms beyond the first plane of physical life The dark side of human nature is explored but mostly in the context of an adventure story about the Coruscus known as Virgil and his warrior companion known as Glaiden The story describes how their relationship was developed and how their efforts to evade the overwhelming Roman forces of the rouge Coruscus known as Baracore When evasion is no longer an option battles ensue

Anatomy and Plasticity in Large-Scale Brain Models Markus Butz, Wolfram Schenck, Arjen van Ooyen, 2017-01-05 Supercomputing facilities are becoming increasingly available for simulating activity dynamics in large scale neuronal networks On today's most advanced supercomputers networks with up to a billion of neurons can be readily simulated However building biologically realistic full scale brain models requires more than just a huge number of neurons In addition to network size the detailed local and global anatomy of neuronal connections is of crucial importance Moreover anatomical connectivity is not fixed but can rewire throughout life structural plasticity an aspect that is missing in most current network models in which plasticity is confined to changes in synaptic strength synaptic plasticity The papers in this Ebook which may broadly be divided into three themes aim to bring together high performance computing with recent experimental and computational research in neuroanatomy In the first theme fiber connectivity new methods are described for measuring and data basing microscopic and macroscopic connectivity In the second theme structural plasticity novel models are introduced that incorporate morphological plasticity and rewiring of anatomical connections In the third theme large scale simulations simulations of large scale neuronal networks are presented with an emphasis on anatomical detail and plasticity mechanisms Together the articles in this Ebook make the reader aware of the methods and models by which large scale brain networks running on supercomputers can be extended to include anatomical detail and plasticity
