

A hand is shown from the bottom, holding a glowing, translucent blue sphere. Inside the sphere is a detailed cityscape at night, with lights from buildings and streets. Overlaid on the cityscape are various network-related icons: a globe, a bar chart, a pie chart, a line graph, a person icon, a gear, and a circular arrow. The sphere is surrounded by a network of glowing blue lines and nodes, some of which are also icons. The background is a blurred cityscape at night.

The network always wins

Is IN an evergreen? Markets
come and go, and seasons
change. But the network is
the only one that is always
there. If you understand
networks, you will understand
the future.

EXCERPT

Traditional hierarchy works perfectly in a stable world defined by predictability repetitive tasks and standardisation In times of constant change speed and instability hierarchy turns out to be an inadequate perverted and perverting system Managers behave like heroes who know it all and treat their staff as children Digital is the opposite of all this digital is the Renaissance of work Focus and power are given to the individual employees and customers Digital transformation kicks out the feudal system that dehumanises work Technology in general and social technologies in particular allow employees to raise their voice and connect with people across hierarchical and geographical boundaries This is quite revolutionary because individuals start to think for themselves and work becomes more purposeful

Inhuman Networks

Grant Bollmer,2016-08-11 Social media s connectivity is often thought to be a manifestation of human nature buried until now revealed only through the diverse technologies of the participatory internet Rather than embrace this view Inhuman Networks Social Media and the Archaeology of Connection argues that the human nature revealed by social media imagines network technology and data as models for behavior online Covering a wide range of historical and interdisciplinary subjects Grant Bollmer examines the emergence of the network as a model for relation in the 1700s and 1800s and follows it through marginal often forgotten articulations of technology biology economics and the social From this history Bollmer examines contemporary controversies surrounding social media extending out to the influence of network models on issues of critical theory politics popular science and neoliberalism By moving through the past and present of network media Inhuman Networks demonstrates how contemporary network culture unintentionally repeats debates over the limits of Western modernity to provide an idealized future where the human is interchangeable with abstract flowing data connected through well managed distributed networks

Artificial Neural Networks - ICANN 2010 Konstantinos

Diamantaras, Wlodek Duch, Lazaros S. Iliadis, 2010-08-12 This volume is part of the three volume proceedings of the 20th International Conference on Artificial Neural Networks ICANN 2010 that was held in Thessaloniki Greece during September 15-18 2010 ICANN is an annual meeting sponsored by the European Neural Network Society ENNS in cooperation with the International Neural Network Society INNS and the Japanese Neural Network Society JNNS This series of conferences has been held annually since 1991 in Europe covering the field of neurocomputing learning systems and other related areas As in the past 19 events ICANN 2010 provided a distinguished lively and interdisciplinary discussion forum for researchers and

scientists from around the globe to get a good chance to discuss the latest advances of research and also all the developments and applications in the area of Artificial Neural Networks (ANNs). ANNs provide an information processing structure inspired by biological nervous systems and they consist of a large number of highly interconnected processing elements (neurons). Each neuron is a simple processor with a limited computing capacity, typically restricted to a rule for combining input signals utilizing an activation function in order to calculate the output.

Output signals may be sent to other units along connections known as weights that excite or inhibit the signal being communicated. ANNs have the ability to learn by example a large volume of cases through several iterations without requiring a predefined knowledge of the relationships between process parameters.

Dots and Lines Anthony Bonato, 2025-05-13 Can networks unlock secrets of AI or make sense of a social media mess? A behind-the-scenes look at how networks reveal reality. According to mathematician Anthony Bonato, the hidden world of networks permeates our lives in astounding ways. From Bitcoin transactions to neural connections, his book explains how networks shape everything from political landscapes to climate patterns and how deceptively simple dots and lines can unveil the wonders of technology, society, and even nature. From a fresh and startling look at the true impact of clever keywords in politicians' social media posts to a fun breakdown of survival strategies in reality TV shows, Bonato shows us how network theory operates everywhere. Each chapter focuses on a unique aspect of networks to reveal how they provide a captivating lens for bringing diverse phenomena into clearer focus. The book offers an accessible snapshot of networks for anyone curious about what makes the modern world tick. Bonato's insights will give readers a deeper appreciation and understanding of networks and their relevance to our everyday lives.
