**On Canvas** Stephen Hackney, 2020-02-11 The first truly comprehensive analysis of the history practice and conservation of painting on canvas Throughout its long history in Western art canvas has played an influential role in the creative process From the Renaissance development of oil painting on canvas to the present day through Impressionism Abstract Expressionism and other art historical movements the use of canvas has enhanced the scale of painting freedom of brushwork and spontaneity in technique This book recounts some of that rich history in relation to corresponding developments in conservation practice Rather than concentrating on the

familiar concerns of cleaning and varnish removal this volume considers the preservation of a painting's structure. By focusing on recent studies on the fundamental nature of canvas and its mechanisms of deterioration, the book explains new approaches to the conservation of both contemporary and historical art, including reversible, passive, and preventive treatments, particularly with respect to lining. Written by Stephen Hackney, a conservation practitioner and leader in conservation research, *On Canvas* is the first book to take a comprehensive look at this important subject and is destined to become an invaluable resource for the field.

*Human Impact on the Natural Environment* Andrew S. Goudie, 2018-08-20 A brand new edition of the definitive textbook on humankind's impact on the Earth's environment, now in full color. This classic text explores the multitude of impacts that humans have had over time upon vegetation, animals, soils, water, landforms, and the atmosphere. It considers the ways in which climate changes and modifications in land cover may change the environment in coming decades. Thoroughly revised to cover the remarkable transformation in interest that humans are having in the environment, this book examines previously uncovered topics such as rewilding, ecosystem services, techniques for study novel and no-analogue ecosystems, and more. It also presents the latest views on big themes such as human origins, the anthropocene, domestication, extinctions, and ecological invasions. Extensively re-written, *Human Impact on the Natural Environment*, Eighth Edition, contains many new and updated statistical tables, figures, and references. It offers enlightening chapters that look at the past and present state of the world, examining our impact on the land itself and the creatures that inhabit it, the oceans, lakes, rivers, and streams, and the climate and atmosphere. The book also takes a deep look at our future impact on the planet and its resources, our affect on the coastal environments, the cryosphere, and the drylands, as well as the hydrological and geomorphological impacts. Fully updated to take account of recent advances in our understanding of global warming and other phenomena, it offers current opinions on such topics as human origins, the anthropocene, domestication, extinctions, and ecological invasions. Features a full color presentation to allow for more and clearer photographs and diagrams. Contains more international case studies than previous editions to balance UK examples. *Human Impact on the Natural Environment* is essential reading for undergraduates in geography and environmental science, and for those who want a thorough, wide-ranging and balanced overview of the impacts of humans upon natural processes and systems from the Stone Age to the Anthropocene, and who wish to understand the major environmental issues that concern the human race at the present time.

**Defending Materialism** Katerina Kolozova, William Paul Cockshott, Greg Michaelson, 2024-11-14 Nobody doubted that atoms were real once atomic energy was developed, but in the early 20th century, and before their existence was widely doubted, *Defending Materialism* follows the political and theoretical background of this intense philosophical controversy, defending atomistic and mechanical materialism against idealist paradigms. These accounts range from the explicit idealism criticised by Lenin and Einstein to the implicit Hegelian idealism that influenced Soviet dialectical materialism. Following several key threads, the authors trace how the idea of atoms has changed over the centuries, how

ideology has influenced both sides of the idealism materialism divide and how the nature of time in physics biology and human society can give a fresh view of historical materialism Starting from the origins of materialism in ancient Greek thought and moving through its revival in Isaac Newton and Charles Darwin gives a full picture of the links between the Marxist tradition and the coarse materiality to which the worlds of science and philosophy have found themselves both subscribed and averse At the Crossroads: Lessons and Challenges in Computational Social Science Javier

Borge-Holthoefer, Yamir Moreno, Taha Yasserli, 2016-11-29 The interest of physicists in economic and social questions is not new for over four decades we have witnessed the emergence of what is called nowadays sociophysics and econophysics vigorous and challenging areas within the wider Interdisciplinary Physics With tools borrowed from Statistical Physics and Complexity this new area of study have already made important contributions which in turn have fostered the development of novel theoretical foundations in Social Science and Economics via mathematical approaches agent based modelling and numerical simulations From these foundations Computational Social Science has grown to incorporate as well the empirical component aided by the recent data deluge from the Web 2.0 and 3.0 closing in this way the experiment theory cycle in the best tradition of Physics **Preventing Chemical Weapons** Michael Crowley, Malcolm Dando, Lijun Shang, 2018-08-20 The

life and chemical sciences are in the midst of a period of rapid and revolutionary transformation that will undoubtedly bring societal benefits but also have potentially malign applications notably in the development of chemical weapons Such concerns are exacerbated by the unstable international security environment and the changing nature of armed conflict which could fuel a desire by certain States to retain and use existing chemical weapons as well as increase State interest in creating new weapons whilst a broader range of actors may seek to employ diverse toxic chemicals as improvised weapons Stark indications of the multi faceted dangers we face can be seen in the chemical weapons attacks against civilians and combatants in Iraq and Syria and also in more targeted chemical assassination operations in Malaysia and the UK Using a multi disciplinary approach and drawing upon an international group of experts this book analyses current and likely near future advances in relevant science and technology assessing the risks of their misuse The book examines the current capabilities limitations and failures of the existing international arms control and disarmament architecture notably the Chemical Weapons Convention in preventing the development and use of chemical weapons Through the employment of a novel Holistic Arms Control methodology the authors also look beyond the bounds of such treaties to explore the full range of international law international agreements and regulatory mechanisms potentially applicable to weapons employing toxic chemical agents in order to develop recommendations for more effective routes to combat their proliferation and misuse A particular emphasis is given to the roles that chemical and life scientists health professionals and wider informed activist civil society can play in protecting the prohibition against poison and chemical weapons and in working with States to build effective and responsive measures to ensure that the rapid scientific and technological advances are safeguarded from

hostile use and are instead employed for the benefit of us all
