## Unit 1 Waves

- How is vibration an observable through continuous, transverse waves (as in the pendulum in this motion of the water).
- Transverse waves (the velocity) is a vibration (wave) the frequency controls wavelength. Longitudinal waves travel through a series of compressions and rarefactions.
- Waves can be described by amplitude, wavelength, and speed. Each one describes the wave.
- As a wave travels through a medium, particles are displaced and continue their normal motion about the wave source.
- Electromagnetic waves differ from other types of waves because they do not need matter through a medium.
- A vibrating wire is oscillating if it moves, you would need to know the maximum displacement from the equilibrium position.
- Given the vibrating pendulum used in our wave motion, what if the mass you are oscillating the pendulum.
- As described in your frequency, pendulum, the period of oscillation is the total time.
- Sound is traveling through a medium, as a transverse displacement of matter in the same direction the wave is traveling. This type of wave is a longitudinal wave.
- Because the particles move parallel to the direction of wave travel.
