

How to Read Research Paper

Abstract

Abstracts are brief summaries of research papers. They are written by the author and provide a quick overview of the paper's content. They are usually 100-200 words long and are located at the beginning of the paper.

Introduction

The introduction provides background information on the topic and states the purpose of the study. It also outlines the research questions and hypotheses. The introduction is usually 1-2 paragraphs long and is located at the beginning of the paper.

Methods

The methods section describes the procedures used to collect and analyze data. It includes information on the study design, participants, measures, and statistical analyses. The methods section is usually 1-2 paragraphs long and is located in the middle of the paper.

Results

The results section presents the findings of the study. It includes data tables, figures, and text descriptions of the results. The results section is usually 1-2 paragraphs long and is located in the middle of the paper.

Discussion

The discussion section interprets the results and discusses their implications. It includes information on the study's strengths and limitations, and suggestions for future research. The discussion section is usually 1-2 paragraphs long and is located at the end of the paper.

Conclusion

The conclusion summarizes the main findings of the study and provides a final statement on the research. It is usually 1-2 paragraphs long and is located at the end of the paper.

Abstract: This study examined the effectiveness of a computerized cognitive-behavioral intervention (CBT) for children with anxiety disorders. The study included 100 children aged 8-12 years who were randomly assigned to either the CBT group or a control group. The CBT group received a 10-week program of CBT, while the control group received a 10-week program of relaxation training. The study found that the CBT group showed significantly greater improvement in anxiety symptoms than the control group.

Combined emergency braking and turning of articulated heavy vehicles

Graeme Morrison, and David Carbon

Department of Engineering, University of Cambridge, Cambridge, UK

ABSTRACT

'Slip control' braking has been shown to reduce the emergency stopping distance of an experimental heavy goods vehicle by up to 10%, compared to conventional electronic/anti-lock braking systems (ABS). However, little regard has been given to the impact of slip control braking on the vehicle's directional dynamics. This paper uses validated computer models to show that slip control could severely degrade directional performance during emergency braking. A modified slip control strategy, 'attenuated slip demand' (ASD) control, is proposed in order to rectify this. Results from simulations of vehicle performance are presented for combined braking and cornering manoeuvres with ABS and slip control braking with and without ASD control. The ASD controller enables slip control braking to provide directional performance comparable with conventional ABS while maintaining a substantial stopping distance advantage. The controller is easily tuned to work across a wide range of different
