MAINTENANCE

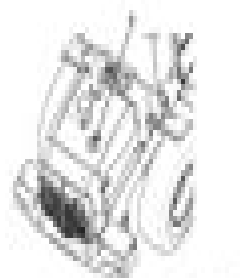

- 1 Check coolant level
→ every 10 hours (daily)

WARNING: Do not remove cap (2) until the coolant temperature in the radiator is such that steam may appear and, possibly causing discomforts. After the coolant temperature cools, slowly lower cap (2) to release the pressure or pressure before removing cap (2).

Check the coolant level at separate work (1). When the coolant temperature is low, the coolant level must be above the top of sight glass (3). If the coolant level is visible when a halfway between the top and bottom of sight glass (3), or the coolant level is visible, which is below the bottom of sight glass (3), fill coolant until the coolant level reaches the top of sight glass (3).

In case coolant level is lower in separate work (1), supply the coolant on the top half of separate work (1).

- When adding a long-life coolant (add), use the same brand product and the same mixture ratio as already used in the machine.
- If only water is added, the coolant rate in the long-life coolant will be diluted so that coolant and antifreeze effect of the coolant will become insufficient.
