

Tornado Scientists

by Christopher

Tornadoes form when swirling winds spin. Wind is invisible, but air can see formations themselves that spinning wind picks up dust, dirt, and debris. This swirling wind forms a funnel that resembles a giant vacuum cleaner sucking up the ground.

When a tornado is close, people run. They can see over 200 miles per hour wind speeds as fast as airplanes. As they move across the land, they can easily pick up cars, houses, and even people. Scientists observe these storms every day. It is important to find a safer place to take shelter if a tornado gets close.

A safe place could be a basement or first floor room, depending on where you are. If you are in a house without a basement, try to find a low-lying area without windows or doors in the middle of your house. You should put up with additional emergency food and water with your family. Stay in a safe place until the storm passes.

Most people don't know how to stay safe when a tornado is near. They don't understand what to do when a storm is near. There are many ways to stay safe when a storm is near. How to Make a Tornado New Scientist, New Scientist Magazine Staff, 2016-07-04 Science tells us grand things about the universe how fast light travels and why stones fall to earth But scientific endeavour goes far beyond these obvious foundations There are some fields we don't often hear about because they are so specialised or turn out to be dead ends Yet researchers have given hallucinogenic drugs to blind people seriously tried to weigh the soul as it departs the body and planned to blast a new Panama Canal with atomic weapons Real scientific breakthroughs sometimes come out of the most surprising and unpromising work How to Make a Tornado is about the margins of science not the research down tried and tested routes but some of its zanier and more brilliant by ways Investigating everything from what it's like to die to exploding trousers and recycled urine this book is a reminder that science is intensely creative and often very amusing and when their minds run free scientists can fire the imagination like nobody else
