The Information System Consultant's Handbook William S. Davis, David C. Yen, 2019-04-30 The Information System Consultant's Handbook familiarizes systems analysts, systems designers, and information systems consultants with underlying principles, specific documentation, and methodologies corresponding to the primary stages in the systems development life cycle. The book divides into eight sections: Principles, Information Gathering and Problem Definition, Project Planning and Project Management, Systems Analysis, Identifying Alternatives, Component Design, Testing and Implementation, Operation and Maintenance. Eighty-two chapters comprise the book, and each chapter covers a single tool, technique, set of principles, or methodology. The clear, concise narrative, supplemented with numerous illustrations and diagrams, makes the material accessible for readers, effectively outlining new and unfamiliar analysis and design topics.

Logic Programming and Nonmonotonic Reasoning Chitta Baral, Gianluigi Greco, Nicola Leone, Giorgio Terracina, 2005-08-25 This book constitutes the refereed proceedings of the 8th International Conference on Logic Programming and Nonmonotonic Reasoning (LPNMR 2005) held in Diamante, Italy, in September 2005. The 25 revised full papers, 16 revised for the system and application tracks, presented together with 3 invited papers, were carefully reviewed and selected for presentation. Among the topics addressed are semantics of new and existing languages, relationships between formalisms, complexity and expressive power, LPNMR systems, development of inference algorithms and search heuristics, updates and other operations, uncertainty, and applications in planning, diagnosis, system descriptions, comparisons, and evaluations, software engineering, decision making, and other domains. LPNMR languages, extensions by new logical connectives, and new inference capabilities, applications in data integration and exchange, systems, and methodology of representing knowledge.

Active Server Pages Programming A Dedeke, 2003-05 The purpose of this book is to give the novice and the professional web designer a concise introduction to the features and use of ASP technology. The book does not assume that the reader has a programming background. The content, by design, emphasizes the learning-by-doing approach. The scripting languages that are used in the text include HTML, VBScript, Visual Basic, and JScript. The text includes projects about database-driven websites, design of web forms, Ad Rotator implementations, and the creation of COM components. The projects also include the use of application and session objects as well as cookies. You will study enough about ASP technology to understand what you are doing and will gain an understanding of ASP programming components by using them. After you complete the assignments in this book, you will be able to adapt many of them for your own website. The projects are designed to work with both Windows 98 and Windows
