low power VLSI design the design space of ASIP instruction set architectures ISAs is introduced with a special focus on
important features for digital signal processing Based on the degrees of freedom offered by this design space a consistent
ASIP design flow is proposed this design flow starts with a given application and uses incremental optimization of the ASIP
hardware of ASIP coprocessors and of the ASIP software by using a top down approach and by applying application specific
modifications on all levels of design hierarchy A broad range of real world signal processing applications serves as vehicle to
illustrate each design decision and provides a hands on approach to ASIP design Finally two complete case studies
