**Paper Folding: Introduction to Exponential Functions**

In this activity you will observe and record the relationship between the number of folds and number of sheets thick of paper.

**Procedure:**

1. Take a sheet of paper. Fold the paper in half once. How many sheets thick is your stack? Record the data in the table below.
2. Using the same sheet of paper, repeat the process as many times as possible. Record your answer in the table for each trial.

Number of Folds ( $x$ )	Number of Sheets Thick ( $y$ )
0	1
1	2
2	4
3	8
4	16
5	32
6	64
$x$	$2^x$

**Analysis Questions:**

1. Describe how the number of sheets thick changes as the number of folds increases.

*\*Try to find a pattern. What is the change in  $y$  with each value of  $x$ ?*

2. Write an equation that describes the relationship between the number of folds and the number of sheets thick.

*\*Can we write an equation to represent the data for all values of  $x$ ? Work in partners for 10 minutes.*

*\*Class discussion: teacher will plot the points from the table on Desmos. The teacher will then graph each equation that students suggest on the same graph. Students will be able to visualize why  $y=2^x$  is the only equation that passes through each point. Therefore, this equation must represent the function of paper folding.*

*\*Ask students: What exactly does this equation tell us? → You can tell the number of sheets thick by solving  $2^{(\# \text{ folds})}$*

**Encyclopedia of the Sciences of Learning** Norbert M. Seel, 2011-10-05 Over the past century educational psychologists and researchers have posited many theories to explain how individuals learn i e how they acquire organize and deploy knowledge and skills The 20th century can be considered the century of psychology on learning and related fields of interest such as motivation cognition metacognition etc and it is fascinating to see the various mainstreams of learning remembered and forgotten over the 20th century and note that basic assumptions of early theories survived several paradigm shifts of psychology and epistemology Beyond folk psychology and its naive theories of learning psychological learning theories can be grouped into some basic categories such as behaviorist learning theories connectionist learning theories cognitive learning theories constructivist learning theories and social learning theories Learning theories are not limited to psychology and related fields of interest but rather we can find the topic of learning in various disciplines such as philosophy and epistemology education information science biology and as a result of the emergence of computer technologies especially also in the field of computer sciences and artificial intelligence As a

consequence machine learning struck a chord in the 1980s and became an important field of the learning sciences in general. As the learning sciences became more specialized and complex the various fields of interest were widely spread and separated from each other as a consequence even presently there is no comprehensive overview of the sciences of learning or the central theoretical concepts and vocabulary on which researchers rely. The Encyclopedia of the Sciences of Learning provides an up to date broad and authoritative coverage of the specific terms mostly used in the sciences of learning and its related fields including relevant areas of instruction pedagogy cognitive sciences and especially machine learning and knowledge engineering. This modern compendium will be an indispensable source of information for scientists educators engineers and technical staff active in all fields of learning. More specifically the Encyclopedia provides fast access to the most relevant theoretical terms provides up to date broad and authoritative coverage of the most important theories within the various fields of the learning sciences and adjacent sciences and communication technologies supplies clear and precise explanations of the theoretical terms cross references to related entries and up to date references to important research and publications. The Encyclopedia also contains biographical entries of individuals who have substantially contributed to the sciences of learning the entries are written by a distinguished panel of researchers in the various fields of the learning sciences. *Environmental Biology for Engineers and Scientists* David A. Vaccari, Peter F. Strom, James E.

Alleman, 2005-10-27 The growth of the environmental sciences has greatly expanded the scope of biological disciplines today's engineers have to deal with. Yet despite its fundamental importance the full breadth of biology has been given short shrift in most environmental engineering and science courses. Filling this gap in the professional literature *Environmental Biology for Engineers and Scientists* introduces students of chemistry physics geology and environmental engineering to a broad range of biological concepts they may not otherwise be exposed to in their training. Based on a graduate level course designed to teach engineers to be literate in biological concepts and terminology the text covers a wide range of biology without making it tedious for non biology majors. Teaching aids include Notes problems and solutions Problem sets at the end of each chapter PowerPoints and many figures. A valuable addition to any civil engineering and environmental studies curriculum this book also serves as an important professional reference for practicing environmental professionals who need to understand the biological impacts of pollution.
